| ISSUE TITLE | MT7601 module initialization conditional fail Patch | | | | |
| Driver VERSION | Linux v3.0.0.3 /Android JB | CHIP | MT7601U/MT7601E | Date | 2014/02/10 |
| Description: The patch optimizes Power Management Unit (PMU) setting to prevent initialization failures. | | | | | |
| How to Fix: <pre>diff -urN WIFI_MT7601_bak/common/rtmp_init_inf.c WIFI_MT7601/common/rtmp_init_inf.c --- WIFI_MT7601_bak/common/rtmp_init_inf.c 2014-01-28 19:35:41.077303375 +0800 +++ WIFI_MT7601/common/rtmp_init_inf.c 2014-01-28 18:56:41.446716514 +0800 @@ -149,6 +149,18 @@ #ifdef MT7601 if (IS_MT7601(pAd) && (pAd->WlanFunCtrl.field.WLAN_EN == 0)) MT7601_WLAN_ChipOnOff(pAd, TRUE, FALSE); + + /* Offset 0x006c <5:1> PMU_OCLEVEL<5:1> default <2'b01100> change to <2'b00110> */ + if (IS_MT7601(pAd)) + { + LDO_CTRL0_STRUC ldo_ctr0; + + RTMP_IO_READ32(pAd, LDO_CTRL0, &ldo_ctr0.word); + printk("1.
