# **Document Revision History**

Revision	Date	Author	Description
1.0	2012/11/08	Pan Liu	Initial Version
1.1	2012/11/13	Pan Liu	Update iwpriv command
1.2	2012/12/11	Pan Liu	Add NoForwardingMBCast
1.3	2013/01/04	Pan Liu	Add VHT_BW and VhtBW
1.4	2013/1/14	Pan Liu	Update Apclient WPS command sample
1.5	2013/1/22	Pan Liu	Add FAQ- FixTxMode iwpriv command sample
1.6	2013/1/23	Pan Liu	Add new DAT item VHT_DisallowNonVHT and SingleSKU.dat
			sample.
1.7	2013/3/6	Pan Liu	Add MAC Repeater section
1.8	2013/3/8	Pan Liu	Add command and profile, DFS debug example
1.9	2013/3/13	Pan Liu	Add Singlesku.dat 5G and 2.4G sample profile and DFS
			example update
2.0	2013/3/15	Pan Liu	Add IgmpAdd1, WPS command and NEW BSSID Mode MAC
			address limitation.
			Update BGProtection
2.1	2013/3/27	Pan Liu	Add EfuseUploadToHost
2.2	2013/3/28	Pan Liu	Add FAQ for TX/RX unbalance issue.
2.3	2013/4/23	Pan Liu	Add iNIC system address configuration for WLAN profile
			support
2.4	2013/4/23	Pan Liu	Add iwpriv command AP2040Rescan, WLAN profile updates
2.5	2013/5/27	Pan Liu	Add WLAN profile and iwpriv parameters for VHT support.
2.6	2013/6/20	Pan Liu	Update WirelessMode=15, correct NoForwardingMBCast,
			Add AutoChannelSkipList
2.7	2013/7/4	Pan Liu	Add WLAN profile "EtherTrafficBand"
2.8	2013/7/26	Pan Liu	Add iNIC only profile and iwpriv command
2.9	2013/8/23	Pan Liu	Add iNIC only profile IsolateCard, EnhanceMultiClient, and
			BGMultiClient.
3.0	2013/8/29	Pan Liu	Add iwpriv command fpga_on, dataphy, databw, databasize,
			datagi, dataldpc for vht mode data rate setting.
3.1	2013/9/03	Pan Liu	Correct TYPO on DisConnectAllSta
3.2	2013/10/03	Pan Liu	Add VHT MCS table in Q&A
3.3	2013/11/20	Pan Liu	Update Multiple Radiu server usage
3.4	2014/01/08	Pan Liu	Add iNIC only new profile parameters
3.5	2014/01/20	Pan Liu	Update iwpriv commands and APClient command example
3.6	2014/02/11	Pan Liu	Add note for WpaMixPairCipher
3.7	2014/02/27	Pan Liu	Add iwpriv command ApCliAutoConnect and update SiteSurvey
3.8	2014/03/07	Pan Liu	Remove RadioOn from profile SoftAP is not support this option
3.9	2014/03/07	Pan Liu	Add iNIC profile TX&RTS retry counter and EDCCA profile
4.0	2014/04/01	Pan Liu	Update BADeline, datamcs and FixTxMode iwpriv command
			samples
4.1	2014/05/29	Hughes Kang	Add EDCCA testing
4.2	2014/07/01	Hughes Kang	Add HT_PROTECT, BASetup, BAOriTearDown,
			BARecTearDown, HT_TxStream, HT_RxStream, HtTxStream,
			HtRxStream, EntryLifeCheck, WAPI related parameters,

			WscStop
4.3	2014/09/16	Hughes Kang	Add PMF
4.4	2014/10/24	Money Wang	Update
			• WDS
			• WMM
			● PMF
			Security
			AP-Client
			MAC Repeater
			IGMP Snooping
			MBSSID
			How to Fix Data Rate
			● FAQ

# 1 Introduction

This document is a software programming guide for Mediatek Wi-Fi SoftAP driver and it teaches you how to configure your own settings. We do provide two kinds of configuration method, profile and iwpriv. Later we show you the profile parameter list, the iwpriv command list, and some OID examples to demonstrate how to fully utilize the WLAN driver.

# 2.1 Sample Profile

# 2.2 Common WLAN Profile Parameters

As you could see in Section 2.1 Sample Profile, all the settings obey the following syntax.

#### [Syntax]

#### Parameter=Value

The WLAN driver needs to be restarted after changing the profile. Otherwise, settings would not take effect and an interface down/up cycle could help.

ifconfig ra0 down ifconfig ra0 up

# 2.2.1 CountryRegion

Description: Country region for WLAN radio 2.4 GHz regulation (G band)

Value:

CountryRegion=5

Region	Channels							
0	1-11							
1	1-13							
2	10-11							
3	10-13							
4	14							
5	1-14							
6	3-9							
7	5-13							
31	1-14							
32	1-11 active scan, 12 and 13 passive scan							
33	1-14 all active scan, 14 b mode only							

# 2.2.2 CountryRegionABand

Description: Country region for WLAN radio 5 GHz regulation (A band)

Value:

CountryRegionABand=7

Region	Channels
0	36, 40, 44, 48, 52, 56, 60, 64, 149, 153, 157, 161, 165
1	36, 40, 44, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136, 140
2	36, 40, 44, 48, 52, 56, 60, 64
3	52, 56, 60, 64, 149, 153, 157, 161
4	149, 153, 157, 161, 165

5	149, 153, 157, 161
6	36, 40, 44, 48
7	36, 40, 44, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136, 140, 149, 153, 157, 161, 165
8	52, 56, 60, 64
9	36, 40, 44, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 132, 136, 140, 149, 153, 157, 161, 165
10	36, 40, 44, 48, 149, 153, 157, 161, 165
11	36, 40, 44, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 149, 153, 157, 161

# 2.2.3 CountryCode

Description: County code for WLAN radio regulation

Value:

CountryCode=

Note:

Default is empy.

2 characters, like TW for Taiwan.

Please refer to the following link for ISO3166 code list for other countries.

http://www.iso.org/iso/prods-services/iso3166ma/02iso-3166-code-lists/country\_names\_and\_code\_elements

This parameter can also be configured in EEPROM or eFuse.

Configuration in EEPROM or eFuse has higher priority than that in WLAN Profile.

# 2.2.4 ChannelGeography

Description: For Channel list builder

Value:

ChannelGeography=1

0: Outdoor 1: Indoor 2: Both

#### 2.2.5 **SSID**

Description: The target BSSID string name configuration

Value:

SSID=11n-AP

0~z, 1~32 ASCII characters

### 2.2.6 WirelessMode

Description: Wireless mode configuration

Value:

WirelessMode=9

0: legacy 11b/g mixed

MediaTek Confidential

© 2014 MediaTek Inc.

- 1: legacy 11B only
- 2: legacy 11A only
- 3: legacy 11a/b/g mixed
- 4: legacy 11G only
- 5: 11ABGN mixed
- 6: 11N only in 2.4G
- 7: 11GN mixed
- 8: 11AN mixed
- 9: 11BGN mixed
- 10: 11AGN mixed
- 11: 11N only in 5G
- 14: 11A/AN/AC mixed 5G band only (Only 11AC chipset support)
- 15: 11 AN/AC mixed 5G band only (Only 11AC chipset support)

#### 2.2.7 Channel

Description: WLAN Radio channel (2.4G Band or 5G band)

Value:

Channel=0

Depends on CountryRegion or CountryRegionForABand.

Default value = 0, the driver scan BSSID's channel automatically.

#### 2.2.8 BasicRate

Description: Basic rate support

Value:

BasicRate=15

0~4095

#### Note:

A bitmap represent basic support rate (A mode not support)

- 1: Basic rate-1Mbps
- 2: Basic rate-2Mbps
- 3: Basic rate-1Mbps, 2Mbps
- 4: Basic rate-5.5Mbps
- 15: Basic rate-1Mbps, 2Mbps, 5.5Mbps, 11Mbps

#### Examples:

Basic Rate Bit Map (max. 12-bit, represent max. 12 basic rates)												
Bit	11	10	9	8	7	6	5	4	3	2	1	0
Rate	54	48	36	24	18	12	9	6	11	5.5	2	1
Set	0	1	0	1	0	1	0	1	1	1	1	1
Hex	5				5				F			
Decimal 1375												

#### Note:

Set correct basic rates set before changing wireless mode.

11B/G Mixed, 11B/G/N Mixed, and 11N Only:

iwpriv ra0 set BasicRate=15 → (0x0F: 1, 2, 5.5, 11 Mbps)

MediaTek Confidential

11B:

iwpriv ra0 set BasicRate=3 11G-Only and 11G/N Mixed: iwpriv ra0 set BasicRate=351 → (0x03: 1, 2 Mbps)

→ (0x15F: 1, 2, 5.5, 11, 6, 12, 24 Mbps)

# 2.2.9 BeaconPeriod

Description: Beacon period setting (It is SoftAP only)

Value:

BeaconPeriod=100

#### 2.2.10 DtimPeriod

Description: DTIM period

Value:

DtimPeriod=1

1~255

#### **2.2.11** TxPower

Description: WLAN Radio Transmit Power setting in percentage

Value:

TxPower=100

0~100

#### 2.2.12 DisableOLBC

Description: Enable or disable OLBC (Overlapping Legacy BSS Condition)

Value:

DisableOLBC=0

0: disable 1: enable

#### 2.2.13 **BGProtection**

Description: Enable/disable WLAN 11B or 11G protection

Value:

BGProtection=0

0: AUTO

1: On

2: Off

#### 2.2.14 MaxStaNum

Description: Configure Maximun numbder of station that could connect with this SoftAP

Value:

MaxStaNum=0

0: disable

1~32

#### 2.2.15 TxAntenna

Description: Configure Tx antenna number

Value:

TxAntenna=1

1: 1Tx1R

2: 2Tx2R

3: 3Tx3R

#### 2.2.16 RxAntenna

Description: Configure Rx antenna number

Value:

RxAntenna=1

1: 1Tx1R

2: 2Tx2R

3: 3Tx3R

#### 2.2.17 TxPreamble

Description: Enable or disable Tx preamble

Value:

TxPreamble=0

0: disable 1: enable

#### 2.2.18 RTSThreshold

Description: Set RTS Threshold

Value:

RTSThreshold=2347

1~2347

# 2.2.19 FragThreshold

Description: Set Fragment threshold

Value:

FragThreshold=2346

256~2346

#### **2.2.20** TxBurst

Description: Enable or disable Tx burst

Value:

TxBurst=1

0: disable 1: enable

# 2.2.21 PktAggregate

Description: Enable or disable Tx Aggregate

Value:

PktAggregate=0

0: disable 1: enable

# 2.2.22 NoForwarding

Description: enable or disable No forwarding STA packet within the same BSSID

Value:

NoForwarding=0

0: disable 1: enable

# 2.2.23 NoForwardingBTNBSSID

Description: enable or disable No Forwarding between each BSSID interface.

Value:

NoForwardingBTNBSSID=0

0: disable 1: enable

# 2.2.24 NoForwardingMBCast

Description: enable or disable No Forwarding multicast/broadcast packets between the same BSSID interface.

Value:

NoForwardingMBCast=0

0: disable 1: enable

#### 2.2.25 HideSSID

Description: enable or disable Hidden SSID support

Value:

HideSSID=0

0: disable 1: enable

# 2.2.26 StationKeepAlive

Description: enable or disable Auto-detect the alive status of the station periodically

Value:

StationKeepAlive=0

0: disable

1~65535 seconds

#### 2.2.27 ShortSlot

Description: enable or disable short slot time

Value:

ShortSlot=1

0: disable 1: enable

#### 2.2.28 AutoChannelSelect

Description: Enable or disable Auto Channel Selection support

Value:

AutoChannelSelect=0

0: disable

1: Old Channel Selection Algorithm

2: New Channel Selection Algorithm

# 2.2.29 AutoChannelSkipList

Description: Configure channels you want to skip when Auto Channel Selection function is enabled Value:

AutoChannelSkipList=<channel\_list>

Example:

<channel\_list>=2;3;4;5;7;8;10;

#### 2.2.30 IEEE80211H

Description: enable or disable IEEE 802.11H support (DFS)

Value:

IEEE80211H=0

0: disable 1: enable

#### 2.2.31 CSPeriod

Description: Set how many beacons with Channel Switch Announcement Element will be sent before changing a new channel.

Value:

CSPeriod=10

 $0 \sim 255$ . The default is 10.

Note: Channel switch period (Beacon count), unit is based on Beacon interval.

#### 2.2.32 WirelessEvent

Description: enable or disable sending wireless event to the system log (Linux only)

Value:

WirelessEvent=0

0: disable 1: enable

#### 2.2.33 IdsEnable

Description: enable or disable intrusion detection system

Value:

IdsEnable=0

0: disable 1: enable

#### 2.2.34 AuthFloodThreshold

Description: enable or disable Authentication frame flood threshold Value:

AuthFloodThreshold=32

0: disable

1~65535. (default=32)

# 2.2.35 ReassocRegFloodThreshold

Description: enable or disable Reassocation request frame flood threshold Value:

ReassocReqFloodThreshold=32

0: disable

1~65535. (default=32)

# 2.2.36 ProbeReqFloodThreshold=32

Description: enable or disable Probe request frame flood threshold Value:

ProbeReqFloodThreshold=32

0: disable

1~65535. (default=32)

#### 2.2.37 DisassocFloodThreshold

Description: enable or disable disassocation frame flood threshold Value:

DisassocFloodThreshold=32

0: disable

1~65535. (default=32)

#### 2.2.38 DeauthFloodThreshold

Description: enable or disable deauthentication frame flood threshold Value:

DeauthFloodThreshold=32

0: disable

1~65535. (default=32)

#### 2.2.39 EapReqFooldThreshold

Description: enable or disable EAP request frame flood threshold

Value:

EapReqFooldThreshold=32

0: disable

1~65535. (default=32)

# 2.2.40 AccessPolicy0

Description: Set the access policy of ACL table 0.

Value:

AccessPolicy0=0

0: Disable this function

1: Allow all entries of ACL table to associate AP

2: Reject all entries of ACL table to associate AP

#### 2.2.41 AccessControlList0

Description: Set the entry's MAC address into ACL table 0.

Value:

AccessControlList0=

[Mac Address];[Mac Address];...

Example:

00:10:20:30:40:50;0A:0b:0c:0D:0e:0f;1a:2b:3c:4d:5e:6f

Note: ACL for Bssid0, max=64

# 2.2.42 AccessPolicy1

Description: Set the access policy of ACL table 1.

Value:

AccessPolicy1=0

0: Disable this function

1: Allow all entries of ACL table to associate AP

2: Reject all entries of ACL table to associate AP

#### 2.2.43 AccessControlList1

Description: Set the entry's MAC address into ACL table 1.

Value:

AccessControlList1=

[Mac Address];[Mac Address];...

MediaTek Confidential

© 2014 MediaTek Inc.

Page 27 of 171

Example:

00:10:20:30:40:50;0A:0b:0c:0D:0e:0f;1a:2b:3c:4d:5e:6f

Note: ACL for Bssid0, max=64

# 2.2.44 AccessPolicy2

Description: Set the access policy of ACL table 2.

Value:

AccessPolicy2=0

0: Disable this function

1: Allow all entries of ACL table to associate AP

2: Reject all entries of ACL table to associate AP

#### 2.2.45 AccessControlList2

Description: Set the entry's MAC address into ACL table2.

Value:

AccessControlList2=

[Mac Address];[Mac Address];...

Example:

00:10:20:30:40:50;0A:0b:0c:0D:0e:0f;1a:2b:3c:4d:5e:6f

Note: ACL for Bssid0, max=64

# 2.2.46 AccessPolicy3

Description: Set the access policy of ACL table 3.

Value:

AccessPolicy3=0

0: Disable this function

1: Allow all entries of ACL table to associate AP

2: Reject all entries of ACL table to associate AP

#### 2.2.47 AccessControlList3

Description: Set the entry's MAC address into ACL table 3.

Value:

AccessControlList3=

[Mac Address];[Mac Address];...

Example:

00:10:20:30:40:50;0a:0b:0c:0d:0e:0f;1a:2b:3c:4d:5e:6f

MediaTek Confidential

© 2014 MediaTek Inc.

Page 28 of 171

Note: ACL for Bssid0, max=64

# 2.2.48 RADIUS\_Server

Description: Configure radius server IP address

Value:

RADIUS\_Server=

IP address.

Example: RADIUS\_Server=192.168.2.3

# 2.2.49 RADIUS\_Port

Description: Configure radius server port number

Value:

RADIUS\_Port=1812

Deafult: 1812

# 2.2.50 RADIUS\_Key

Description: Configure radius key string

Value:

RADIUS\_Key=

Example:

RADIUS\_Key=ralink

# 2.2.51 own\_ip\_addr

Descripion: Configure SoftAP itself IP Address

Value:

own\_ip\_addr=

Example:

own\_ip\_addr=192.168.1.1

### 2.2.52 EAPifname

Description: EAPifname is assigned as the binding interface for EAP negotiation

Value:

EAPifname=

Example:

EAPifname=br0

#### 2.2.53 PreAuthifname

Description: PreAuthifname is assigned as the binding interface for WPA2 Pre-authentication Value:

PreAuthifname=

Example:

PreAuthifname=br0

# 2.2.54 HT HTC

Description: enable or disable Support the HT control field

Value:

HT\_HTC=0

0: disable 1: enable

Note: HTC Control field (4-octet) is following QoS field. An MPDU that contains the HT control field is referred to as a +HTC frame.

# 2.2.55 HT\_RDG

Description: Enable or disable HT Reverse Direction Grant

Value:

HT\_RDG=1

0: disable 1: enable

### 2.2.56 HT\_EXTCHA

Description: To locate the 40MHz channel in combination with the control Value:

HT EXTCHA=0

0: Below 1: Above

# 2.2.57 HT\_LinkAdapt

Decription: enable ir disable HT Link Adaptation Control

Value:

HT\_LinkAdapt=0

0: disable 1: enable

MediaTek Confidential

#### 2.2.58 HT\_OpMode

Description: HT operation mode

Value:

HT\_OpMode=0

0: HT mixed mode 1: HT Greenfield mode

#### 2.2.59 **HT\_MpduDensity**

Description: Minimum separation of MPDUs in an A-MPDU

Value:

HT\_MpduDensity=4

0~7

0: no restriction

1: 1/4 µs

2: 1/2 µs

3: 1 µs

4: 2 µs 5: 4 µs

6: 8 µs

7: 16 µs

#### 2.2.60 HT BW

Description: HT channel bandwidth configuration

Value:

HT BW=1

0: 20 MHz

1: 20/40 MHz

#### HT PROTECT 2.2.61

Description: Enable or disable 802.11n protection mechanism

Value:

HT\_PROTECT=1

0: Disable

1: Enable

#### 2.2.62 **HT\_BSSCoexistence**

Description: Enable or disable HT BSS coexistence support

Value:

HT\_BSSCoexistence=1

MediaTek Confidential

© 2014 MediaTek Inc.

Page 31 of 171

0: Disable

1: Enable

# 2.2.63 HT\_TxStream

Description: Set the number of spatial streams for transmission.

Value:

HT\_TxStream=1/2/3

1~3: valid spatial streams

# 2.2.64 HT\_RxStream

Description: Set the number of spatial streams for reception.

Value:

HT\_RxStream=1/2/3

1~3: valid spatial streams

# 2.2.65 HT\_BADecline

Description: Enable or disable decline Block Ack to peer

Value:

HT\_BADecline=0

0: disable 1: enable

#### 2.2.66 HT AutoBA

Description: Enable or disable auto build Block Ack section with peer

Value:

HT\_AutoBA=1

0: disable 1: enable

# 2.2.67 HT\_AMSDU

Description: Enable or disable AMSDU section

Value:

HT\_AMSDU=0

0: disable 1: enable

MediaTek Confidential

© 2014 MediaTek Inc.

# 2.2.68 HT BAWinSize

Description: Block Ack window size

Value:

HT\_BAWinSize=64

1~64

### 2.2.69 HT GI

Description: HT Guard interval support

Value:

HT\_GI=1

0: Long guard interval1: short guard interval

# 2.2.70 HT\_MCS

Description: WLAN Modulation and Coding Scheme (MCS)

Value:

HT\_MCS=33

0 ~15, 32: Fix MCS rate for HT rate. 33: Auto Rate Adaption, recommended

# 2.2.71 HT MIMOPSMode

Description: 802.11n SM power save mode

Value:

HT\_MIMOPSMode=3

0: Static SM Power Save Mode

2: Reserved

1: Dynamic SM Power Save Mode

3: SM enabled (not fully support yet)

# 2.2.72 HT\_DisallowTKIP

Description: Enable or disable 11N rate with 11N AP when cipher is TKIP or WEP Value:

HT\_DisallowTKIP=1

0: disable

MediaTek Confidential

© 2014 MediaTek Inc.

Page 33 of 171

#### 1: enable

# 2.2.73 HT STBC

Description: Enable or disable HT STBC support

Value:

HT\_STBC=0

0: disable 1: enable

# 2.2.74 VHT\_BW

Description: Enable or disable 11ac 80MHz bandwidth

Value:

VHT\_BW=1

0: disable 1: enable

Note: 11AC chipset only

# 2.2.75 VHT\_STBC

Description: Enable or disable 11ac STBC

Value:

VHT\_STBC=1

0: disable 1: enable

Note: 11AC chipset only

# 2.2.76 VHT\_BW\_SIGNAL

Description: Enable or disable 11ac bandwidth signaling

Value:

VHT\_BW\_SIGNAL=1

0: disable 1: enable

Note: 11AC chipset only

# 2.2.77 VHT\_LDPC

Description: Enable or disable LDPC on received packets with 11ac MCS

Value:

VHT\_LDPC=1

0: disable 1: enable

Note: 11AC chipset only

#### 2.2.78 VHT\_DisallowNonVHT

Description: Enable or disable the function of rejecting connection attempt from non-VHT STA

Value:

VHT\_DisallowNonVHT=1

0: disable 1: enable

Note: 11AC chipset only

#### 2.2.79 WscManufacturer

Description: WPS manufacturer string

Value:

WscManufacturer=

Less than 64 characters

#### 2.2.80 WscModelName

Description: WPS Mode name string

Value:

WscModelName=

Less than 32 characters

### 2.2.81 WscDeviceName

Description: WPS Device name string

Value:

WscDeviceName=

Less than 32 characters

#### 2.2.82 WscModelNumber

Description: WPS Device model number string

Value:

WscModelNumber=

Less than 32 characters

#### 2.2.83 WscSerialNumber

Description: WPS serial number string

Value:

WscSerialNumber=

Less than 32 characters

# 2.2.84 Wsc4digitPinCode

Description: WPS 4 digit pin code string

Value:

Wsc4digitPinCode=0

4 digit

# 2.2.85 **VLANID**

Description: set VLAN ID

Value:

VLANID=0

0: Disable

# 2.2.86 VLANPriority

Description: set VLAN Priority

Value:

VLANPriority=0

0: Disable

# 2.2.87 E2pAccessMode

Description: Select the EEPROM access mode from interface start-up

Value:

E2pAccessMode=2

- 0: NONE
- 1: EFUSE mode
- 2: FLASH mode
- 3: EEPROM mode
- 4: BIN FILE mode

## 2.2.88 EntryLifeCheck

Description: Set how many continued TX failure packets per STA can be ignored. Over the value, AP will tear down this STA, because it shall be gone.

Value:

EntryLifeCheck=20

Example:

EntryLifeCheck=1 ~ 65535. Default is 20.

## 2.2.89 EtherTrafficBand

Description: To bind enthernet packets with specific RF band

Value:

EtherTrafficBand=2G

2G: Bind enthernet packets with 2.4GHz RF Band 5G: Bind enthernet packets with 5GHz RF Band

Note: only available after SoftAP driver v3.0.1.2. or after version

# 2.3 WAPI Specific

## 2.3.1 Wapiifname

Description: Assign an interface name to process the WAI frame. The WAPID daemon shall be bound on this interface. If it doesn't specify, the default interface is "br0". Value:

br0: default binding interface

## 2.3.2 WapiAsCertPath

Description: Assign the path of the AS certificate for the WAPI certificate authentication. Value:

WapiAsCertPath=/etc/as.cer

## 2.3.3 WapiAslpAddr

Description: Assign the IP address of the AS for the WAPI certificate authentication.

Value:

WapiAsIpAddr=192.168.222.174

# 2.3.4 WapiAsPort

Description: Assign the port number of the AS for the WAPI certificate authentication.

Value:

WapiAsPort=3810

# 2.3.5 WapiMskRekeyMethod

Description: Set the method for WAPI group key renew mechanism

Value:

DISABLE : Disable the rekey mechanism

TIME: time-based PKT: packet-based

## 2.3.6 WapiMskRekeyThreshold

Description: Set the period of WAPI group key updating

Value:

0: Disable this mechanism  $10 \sim 0x3ffffff$ , Default is 3600.

# 2.3.7 WapiPsk1

Description: Set the WAPI pre-shared key

Value:

8~64 characters

# 2.3.8 WapiPskType

Description: Set the WAPI key type

Value:

0: HEX mode1: ASCII mode

## 2.3.9 WapiUserCertPath

Description: Assign the path of the user certificate for the WAPI certificate authentication Value:

WapiUserCertPath=/etc/user.cer

# 2.3.10 WapiUskRekeyMethod

Description: Set the method for WAPI unicast key renew mechanism

Value:

DISABLE : Disable the rekey mechanism

TIME: time-based PKT: packet-based

# 2.3.11 WapiUskRekeyThreshold

Description: Set the period of WAPI unicast key updating

Value:

0: Disable this mechanism  $10 \sim 0x3ffffff$ , Default is 3600

# 2.4 iNIC Specific

# 2.4.1 Ext\_LNA

Description: support External or internal LNA

Value:

Ext\_LNA

0: Internal LNA
1: External LNA

Note: MT7620 iNIC driver only profile

## 2.4.2 Ext PA

Description: support External or internal PA

Value:

Ext\_PA

0: Internal PA1: External PA

Note: MT7620 iNIC driver only profile

#### 2.4.3 ExtEEPROM

Description: Support driver to read EEPROM from an external file

Value:

ExtEEPROM=1

0: read EERPM data from EEPROM chip1: read EEPROM data from an external file

Note: The external EEPROM file must be exactly the same format as EEPROM format. iNIC driver only profile.

## 2.4.4 Mem

Description: Support WLAN profile can configure iNIC system address value Value:

Mem=addr1,value1;addr2,value2;

Example:

Mem=b0110014,ff7f5555;b011008c,2404040;

iNIC firmware will Set

- 1. memory address (0xb0110014) value (0xff7f5555);
- 2. memory address (0xb011008c) value (0x2404040);

Note: This parameter is only for iNIC driver.

## 2.4.5 DetectPhy

Description: Disable/Enable iNIC Phy link detection. if Phy link down will reset iNIC to load firmware. Value:

DetectPhy=0

0: disable 1: enable

Note: only available on iNIC MT76XX FW v2.7.0.8 and after.

### 2.4.6 Thermal

Description: Disable/Enable iNIC thermal function

Value:

Thermal=0

0: disable 1: enable

Note:

Thermal function will be according to criteria with current temperature to configure Ant.

Criteria Value: 1~1000

default:80

Example:

iwpriv ra0 set tpc =80

Only available on iNIC MT76XX FW v2.7.0.8 and after.

## 2.4.7 %s\_DfsSwAddCheck%d

Description: WLAN profile parameter to check DFS false alarm.

The first string is RDRegion. RDRegion string can be "CE", "FCC", "JAP", "JAP\_W53", "JAP\_W56". The second integer is channel index. Channel index can be from 0 to 4.

Value:

There are four parameter (Period low, Period High, Width low, Width high) in one rule. Multiple rules can be used. At least one rule must be used. Each parameter is separated by semicolon. T\_Low;T\_High;W\_Low;W\_High

For example:

CE\_DfsSwAddCheck0=100;200;50;500 FCC DfsSwAddCheck0=100;200;50;500;70;700;30;300

Note: only available on iNIC MT76XX FW v2.7.0.8 and after.

#### 2.4.8 IsolateCard

Description: Disable/Enable for iNIC isolate concurrent card traffic.

Value:

IsolateCard=0

0: disable

1: enable (iNIC concurrent card traffic can't forward to each other)

Note: only available on iNIC MT76XX FW v2.7.0.9 and after.

#### 2.4.9 EnhanceMultiClient

Description: Disable/Enable multiple N client related configuration.

Value:

EnhanceMultiClient=0

0: disable 1: enable

Note: only available on iNIC MT76XX FW v2.7.0.9 and after.

MediaTek Confidential

© 2014 MediaTek Inc.

## 2.4.10 BGMultiClient

Description: Disable/Enable multiple legacy client related configuration.

Value:

BGMultiClient=0

0: disable 1: enable

Note: only available on iNIC MT76XX FW v2.7.0.9 and after.

# 2.4.11 RssiDisauth

Description: Disable or Enable RSSI disassociate feature..

Value:

RssiDisauth=0

0: disable 1: enable

Default: 0 (disable);

If Enable RSSI disassociate feature.

Two scenarios for this feature:

- (1.) STA was exceeded the RssiThreshold value. AP will disassociate STA.
- (2.) Periodically Checking:

After client was associated. AP will check RSSI periodically base on PollingRssiInterval. If STA was exceeding the RssiThreshold. A counter will be increase. STA will be disassociated when STA's own counter was exceeded TimeExceedRssiThreshold. The counter will be reset if AP found STA didn't exceed the RSSI threshold.

Note: only available on iNIC MT76XX FW v2.7.1.0 and after.

# 2.4.12 RssiThreshold

Description: Minimum RSSI disassociate threshold.

Value:

RssiThreshold=0

Default : 0 (disable); value : -100 ~ -1

Note: only available on iNIC MT76XX FW v2.7.1.0 and after.

## 2.4.13 PollingRssiInterval

Description: Polling time interval for check STA RSSI( in second ).

Value:

PollingRssiInterval=0

Default : 0 (disable); value : 1 ~ 3600

Note: only available on iNIC MT76XX FW v2.7.1.0 and after.

## 2.4.14 TimeExceedRssiThreshold

Description: Time of user exceed the RSSI threshold before disassociate Value:

TimeExceedRssiThreshold=0

Default : 0 (disable); value : 1 ~ 10000

Note: only available on iNIC MT76XX FW v2.7.1.0 and after.

## 2.4.15 SiteSurveyRssi

Description: Disable or Enable get RSSI for each Site Survey APT

Value:

SiteSurveyRssi=0

Default : 0 value : 0/1

Note: only available on iNIC MT76XX FW v2.7.1.0 and after.

### 2.4.16 AssociationInfoEvent

Description: Disable or Enable association send event include wireless mode/PHY rate/RSSI Value:

AssociationInfoEvent=0

Default : 0 value : 0/1

Note: only available on iNIC MT76XX FW v2.7.1.0 and after.

#### 2.4.17 EDCCA

Description: Disable or Enable EDCCA function

Value:

MediaTek Confidential © 2014 MediaTek Inc. Page 43 of 171

#### EDCCA=0

Default: 0 value: 0/1

Note: only available on iNIC MT76XX FW v2.7.1.0 and after.

# 2.4.18 TX\_RETRY\_NUM

Description: Tx retry number

Value:

TX\_RETRY\_NUM=3

Default:0

Note: only available on iNIC MT76XX FW v3.0.0.2 and after.

## 2.4.19 RTS\_RETRY\_NUM

Description: RTC retry number

Value:

RTS\_RETRY\_NUM=3

Default=0

Note: only available on iNIC MT76XX FW v3.0.0.2 and after.

## 2.4.20 EDCCA\_AP\_STA\_TH

Description: STA count on SoftAP

Value:

EDCCA\_AP\_STA\_TH=1

Default:1

Note: only available on iNIC MT76XX FW v3.0.0.2 and after.

## 2.4.21 EDCCA AP AP TH

Description: SoftAP count on the same working channel

Value:

EDCCA\_AP\_AP\_TH=1

Default:1

Note: only available on iNIC MT76XX FW v3.0.0.2 and after.

MediaTek Confidential

# 2.4.22 EDCCA\_AP\_RSSI\_TH

Description: SoftAP count threshold on the same working channel, only when SofAP RSSI is greater than the configured level.

Value:

EDCCA\_AP\_RSSI\_TH=-80

Note: only available on iNIC MT76XX FW v3.0.0.2 and after.

# 3 WLAN SoftAP Driver iwpriv set command

Syntax is iwpriv ra0 set [parameters]=[Value]

Note: Execute one iwpriv/set command at a time.

# **3.1.1** Debug

Description: config WLAN driver Debug level.

Value:

iwpriv ra0 set Debug=3

0~5

0: Debug Off

1: Debug Error

2: Debug Warning

3: Debug Trace

4: Debug Info

5: Debug Loud

## 3.1.2 DriverVersion

Description: Check driver version by iwpriv command. (Need to enable debug mode) Value:

iwpriv ra0 set DriverVersion=0

Any value

# 3.1.3 CountryRegion

Description: Country region for WLAN radio 2.4 GHz regulation (G band) Value:

iwpriv ra0 set CountryRegion=5

Region	Channels
0	1-11
1	1-13
2	10-11
3	10-13
4	14
5	1-14
6	3-9
7	5-13
31	1-14
32	1-11 active scan, 12 and 13 passive scan

# 3.1.4 CountryRegionABand

Description: Country region for WLAN radio 5 GHz regulation (A band)

Value:

iwpriv rai0 set CountryRegionABand=7

Region	Channels
0	36, 40, 44, 48, 52, 56, 60, 64, 149, 153, 157, 161, 165
1	36, 40, 44, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136, 140
2	36, 40, 44, 48, 52, 56, 60, 64
3	52, 56, 60, 64, 149, 153, 157, 161
4	149, 153, 157, 161, 165
5	149, 153, 157, 161
6	36, 40, 44, 48
7	36, 40, 44, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136, 140, 149, 153, 157, 161, 165
8	52, 56, 60, 64
9	36, 40, 44, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 132, 136, 140, 149, 153, 157, 161, 165
10	36, 40, 44, 48, 149, 153, 157, 161, 165
11	36, 40, 44, 48, 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 149, 153, 157, 161

# 3.1.5 CountryCode

Description: County code for WLAN radio regulation

Value:

iwpriv ra0 set CountryCode=TW

Note:

2 characters, like TW for Taiwan.

Please refer to the following link for ISO3166 code list for other countries.

http://www.iso.org/iso/prods-services/iso3166ma/02iso-3166-code-lists/country\_names\_and\_code\_elements

# 3.1.6 AccessPolicy

Description: Configure access policy of ACL table

Value:

iwpriv ra0 set AccessPolicy=0

0: Disable this function

1: Allow all entries of ACL table to associate AP

2: Reject all entries of ACL table to associate AP

## 3.1.7 ResetCounter

Description:Reset all statistic counter

Value:

iwpriv ra0 set ResetCounter=1

MediaTek Confidential

# 3.1.8 SiteSurvey

Description: Make a site survey request to the driver

Value:

iwpriv ra0 set SiteSurvey=

Note:

Passive scan: Use empty string as argument, like "iwpriv ra0 set SiteSurvey="

Active scan: Use legal SSID as argument, like "iwpriv ra0 set SiteSurvey=Target\_SSID"

# 3.1.9 CountryString

Description: configure country string

Value:

iwpriv ra0 set CountryString=TAIWAN

32 characters, ex: Taiwan, case insensitive

Note: Please refer to ISO3166 code list for other countries and can be found at <a href="http://www.iso.org/iso/en/prods-services/iso3166ma/02iso-3166-code-lists/list-en1.html#sz">http://www.iso.org/iso/en/prods-services/iso3166ma/02iso-3166-code-lists/list-en1.html#sz</a>

### 3.1.10 SSID

Description: Set AP SSID

Value:

iwpriv ra0 set SSID=11n-AP

0~z, 1~32 ASCII characters

### 3.1.11 WirelessMode

Description: Set WLAN mode

Value:

iwpriv ra0 set WirelessMode=5

0: legacy 11b/g mixed

1: legacy 11B only

2: legacy 11A only

3: legacy 11a/b/g mixed

4: legacy 11G only

5: 11ABGN mixed

6: 11N only

7: 11GN mixed

8: 11AN mixed

9: 11BGN mixed

10: 11AGN mixed

11: 11N only in 5G band only

14: 11A/AN/AC mixed 5G band only (Only 11AC chipset support)
15: 11 AN/AC mixed 5G band only (Only 11AC chipset support)

### 3.1.12 FixedTxMode

Description: Fix Tx mode to CCK or OFDM for MCS rate selection

Value:

iwpriv ra0 set FixedTxMode=CCK

CCK OFDM

#### 3.1.13 BasicRate

Description: configure basic rate

MediaTek Confidential

Value:

iwpriv ra0 set BasicRate=

0~4095

Basic Rate Bit Map												
(max. 12-bit	(max. 12-bit, represent max. 12 basic rates)											
Bit	11	10	9	8	7	6	5	4	3	2	1	0
Rate	54	48	36	24	18	12	9	6	11	5.5	2	1
Set	0	1	0	1	0	1	0	1	1	1	1	1
Hex	5 F											
Decimal	1375											

Note: Be careful to set this value, if you don't know what this is, please don't set this field.

## 3.1.14 Channel

Description: Configure wireless channel

Value:

iwpriv ra0 set Channel=6

802.11b/g: 1 ~ 14 (it must agree with the CountryRegion setting)

802.11a: 36~165 (it must agree with the CountryRegionABand setting)

## 3.1.15 BeaconPeriod

Description: configure Beacon period

Value:

iwpriv ra0 set BeaconPeriod=100

20 ~ 1024 (unit is in milli-seconds)

#### 3.1.16 DtimPeriod

Description: Configure DTIM period

Value:

iwpriv ra0 set DtimPeriod=1

1~5

### **3.1.17** TxPower

Description: Set Transmit Power by percentage

Value:

iwpriv ra0 set TxPower=100

0~100

Note:

91 ~ 100% & AUTO, treat as 100% in terms of mW

MediaTek Confidential

© 2014 MediaTek Inc.

61 ~ 90%, treat as 75% in terms of mW	-1dBm
31 ~ 60%, treat as 50% in terms of mW	-3dBm
16 ~ 30%, treat as 25% in terms of mW	-6dBm
10 ~ 15%, treat as 12.5% in terms of mW	-9dBm
0 ~ 9 %, treat as MIN(~3%) in terms of mW	-12dBm

#### 3.1.18 BGProtection

Description: Enable or disable 11B, 11G protection

Value:

iwpriv ra0 set BGProtection=0

0: disable 1: Always on 2:Always off

## 3.1.19 DisableOLBC

Description: enable or disable OLBC

Value:

iwpriv ra0 set DisableOLBC=0

0: disable 1: enable

### 3.1.20 TxPreamble

Description: enable or disable Tx preamble

Value:

iwpriv ra0 set TxPreamble=1

0: disable 1: enable

## 3.1.21 RTSThreshold

Description: Set RTS Threshold

Value:

iwpriv ra0 set RTSThreshold=2347

1~2347

# 3.1.22 FragThreshold

Description: Set Fragment threshold

Value:

iwpriv ra0 set FragThreshold=2346

MediaTek Confidential

© 2014 MediaTek Inc.

Page 52 of 171

#### **3.1.23** TxBurst

Description: enable or disable Tx burst mode

Value:

iwpriv ra0 set TxBurst=0

0: disable 1: enable

# 3.1.24 PktAggregate

Description: enable or disable packet aggregation (Ralink to Ralink only)

Value:

iwpriv ra0 set PktAggregate=1

0: disable 1: enable

# 3.1.25 NoForwarding

Description: enable or disable no forwarding packet between STAs in the same BSSID Value:

iwpriv ra0 set NoForwarding=0

0: disable 1: enable

# 3.1.26 NoForwardingBTNBSSID

Description: enable or disable No Forwarding between each BSSID interface.

Value:

iwpriv ra0 set NoForwardingBTNBSSID=1

0: disable 1: enable

# 3.1.27 NoForwardingMBCast

Description: enable or disable No Forwarding multicast/broadcast packets between each BSSID interface.

Value:

iwpriv ra0 set NoForwardingMBCast=1

0: disable

MediaTek Confidential

1: enable

## 3.1.28 HideSSID

Description: enable or disable hidden SSID

Value:

iwpriv ra0 set HideSSID=1

0: disable 1: enable

#### 3.1.29 ShortSlot

Description: enable or disabllle short slot time

Value:

iwpriv ra0 set ShortSlot=0

0: disable 1: enable

## 3.1.30 DisConnectSta

Description: Disconnect one specific STA which connected with this SoftAP manually

Value:

iwpriv ra0 set DisConnectSta=00:11:22:33:44:55

[MAC address]

## 3.1.31 DisConnectAllSta

Description: Disconnect all STAs which connected with this SoftAP manually.

Value:

iwpriv ra0 set DisConnectAllSta=1

1: disconnect all STAs

## 3.1.32 McastPhyMode

Description: Configure multicast physical mode

Value:

iwpriv ra0 set McastPhyMode=0

- 0: Disable
- 1: CCK
- 2: OFDM
- 3 HTMIX

#### 3.1.33 McastMcs

Description: Specify the MCS of multicast packets.

Value:

iwpriv ra0 set McastMcs=0

0~15

#### 3.1.34 WscVendorPinCode

Description: Set vendor pin code as pin code of WPS AP's enrollee

Value:

iwpriv ra0 WscVendorPinCode=xxxxxxx

xxxxxxxx //Valid PIN code

# 3.1.35 ACLAddEntry

Description: To insert one or several MAC addresses into Access control MAC table list, up to 64 MAC address at one time.

Value:

iwpriv ra0 set ACLAddEntry="xx:xx:xx:xx:xx:xx"

[MAC address];[MAC address];...;[MAC address]" Example:

iwpriv ra0 set ACLAddEntry="00:0c:43:28:aa:12;00:0c:43:28:aa:11;00:0c:43:28:aa:10"

### 3.1.36 ACLClearAll

Description: To clear all the MAC address entries in an Access control MAC table list. Value:

iwpriv ra0 set ACLClearAll=1

1: indicate to clear the table Other value is invalid.

## 3.1.37 MaxStaNum

Description: To limit the maximum number of associated clients per BSS.

Value:

iwpriv ra0 set MaxStaNum=0

0: disable this function 1~32 (default:32)

#### 3.1.38 AutoFallBack

Description: enable or disable auto fall back rate control function

Value:

iwpriv ra0 set AutoFallBack=1

0: disable 1: enable

#### 3.1.39 **GreenAP**

Description: enable or disable Green AP fucntion

Value:

iwpriv ra0 set GreenAP=0

0: disable 1: enable

#### 3.1.40 AutoChannelSel

Description: auto channel select when driver is loaded

Value:

iwpriv ra0 set AutoChannelSel=2

0: Disable

Old Channel Selection Algorithm
 New Channel Selection Algorithm

## 3.1.41 ACSCheckTime

Description: Set a periodic check time for auto channel selection (unit: hour)

Value:

iwpriv ra0 set ACSCheckTime=3

0: Disable

### 3.1.42 MBSSWirelessMode

Description: Set MBSS Wireless phy Mode. Only support in v2.5.0.0 and after version.

Value:

0: 802.11 B/G mixed

1: 802.11 B only

2: 802.11 A only

4: 802.11 G only

6: 802.11 N only

7: 802.11 G/N mixed

8: 802.11 A/N mixed

9: 802.11 B/G/N mixed 10: 802.11 A/G/N mixed

11: 802.11 N in 5G band only

MediaTek Confidential

© 2014 MediaTek Inc.

Page 56 of 171

Example:

ra0: B/G/N fixed ra1: B only ra2: B/G mixed ra3: G only

Must set main BSS (ra0) first then set other MBSS WirelessMode. Can't have A & B mode fixed in

MBSS.

iwpriv ra0 set WirelessMode=9 iwpriv ra1 set MBSSWirelessMode=1 iwpriv ra2 set MBSSWirelessMode=0 iwpriv ra3 set MBSSWirelessMode=4

## 3.1.43 HwAntDiv

Description: enable or disable Hardware antenna diversity

Value:

iwpriv ra0 set HwAntDiv=0

0: disable 1: enable

Note: RT5350 only

#### 3.1.44 HtBw

Description: HT channel bandwidth configuration

Value:

iwpriv ra0 set HtBw=1

0: 20 MHz 1: 20/40 MHz

#### 3.1.45 VhtBw

Description: Enable or disable 11AC 80MHz Bandwidth support

Value:

iwpriv ra0 set VhtBw=1

0: disable 1: enable

Note: 11AC chipset only

#### 3.1.46 VhtStbc

Description: Enable/disable 11AC STBC Support

Value:

MediaTek Confidential

© 2014 MediaTek Inc.

Page 57 of 171

iwpriv ra0 set VhtStbc=1

0: disable 1: enable

Note: 11AC chipset only

# 3.1.47 VhtBwSignal

Description: Enable/disable 11 AC BandWidth signaling

Value:

iwpriv ra0 set VhtBwSignal=1

0: disable 1: enable

Note: 11AC chipset only.

## 3.1.48 VhtDisallowNonVHT

Description: Enable/disable to reject non-VHT STA to connect

Value:

iwpriv ra0 set VhtDisallowNonVHT=1

0: disable

1: enable to reject non-VHT STA

Note: 11AC chipset only.

#### 3.1.49 HtMcs

Description: Set WLAN Modulation and Coding Scheme (MCS)

Value:

iwpriv ra0 set HtMcs=33

0 ~15, 32: Fix MCS rate for HT rate. 33: Auto Rate Adaption, recommended

HT Mixed Mode, Refer to IEEE P802.11n Figure n67				
HT Greenfield, Refer to IEEE	P802.11n Figure n68			
MCS = 0 (1S)	(BW=0, SGI=0) 6.5Mbps			
MCS = 1	(BW=0, SGI=0) 13Mbps			
MCS = 2	(BW=0, SGI=0) 19.5Mbps			
MCS = 3	(BW=0, SGI=0) 26Mbps			
MCS = 4	(BW=0, SGI=0) 39Mbps			
MCS = 5	(BW=0, SGI=0) 52Mbps			
MCS = 6	(BW=0, SGI=0) 58.5Mbps			
MCS = 7	(BW=0, SGI=0) 65Mbps			
MCS = 8 (2S)	(BW=0, SGI=0) 13Mbps			
MCS = 9	(BW=0, SGI=0) 26Mbps			
MCS = 10	(BW=0, SGI=0) 39Mbps			
MCS = 11	(BW=0, SGI=0) 52Mbps			

MediaTek Confidential

© 2014 MediaTek Inc.

Page 58 of 171

MCS = 12	(BW=0, SGI=0) 78Mbps
MCS = 13	(BW=0, SGI=0) 104Mbps
MCS = 14	(BW=0, SGI=0) 117Mbps
MCS = 15	(BW=0, SGI=0) 130Mbps
MCS = 32	(BW=1, SGI=0) HT duplicate 6Mbps

#### Notes:

When BW=1, PHY\_RATE = PHY\_RATE \* 2 When SGI=1, PHY\_RATE = PHY\_RATE \* 10/9 The effects of BW and SGI are accumulative.

When MCS=0~7(1S, One Tx Stream), SGI option is supported. BW option is supported. When MCS=8~15(2S, Two Tx Stream), SGI option is supported. BW option is supported. When MCS=32, only SGI option is supported. BW option is not supported. (BW =1)

Other MCS code in HT mode are reserved.

### 3.1.50 HtGi

Description: Set WLAN Guard interval support

Value:

iwpriv ra0 set HtGi=1

0: long guard interval1: short guard interval

# 3.1.51 HtOpMode

Description: HT operation Mode

Value:

iwpriv ra0 set HtOpMode=0

0: HT mixed mode1: HT Greenfield mode

#### 3.1.52 HtStbc

Description: Enable or disable HT STBC

Value:

iwpriv ra0 set HtStbc=1

0: disable 1: enable

## 3.1.53 HtExtcha

Description: To locate the 40MHz channel in combination with the control Value:

iwpriv ra0 set HtExtcha=0

MediaTek Confidential

0: below 1: Above

# 3.1.54 HtMpduDensity

Description: Minimum separation of MPDUs in an A-MPDU

Value:

iwpriv ra0 set HtMpduDensity=4

0~7

0: no restriction

1: 1/4 µs

2: 1/2 µs

3: 1 µs

4: 2 µs

5: 4 µs

6: 8 µs

7: 16 µs

## 3.1.55 HtBaWinSize

Description: Block Ack window size

Value:

iwpriv ra0 set HtBaWinSize=64

1~64

## 3.1.56 HtTxBASize

Description: Set the number of AMPDU aggregation size of one transmission burst.

Value:

iwpriv ra0 set HtTxBASize=64

1~64: valid value

## 3.1.57 HtRdg

Description: Enable or disable HT Reverse Direction Grant

Value:

iwpriv ra0 set HtRdg=1

0: disable 1: enable

## 3.1.58 HtAmsdu

Description: Enable or disable AMSDU section

Value:

Iwpriv ra0 set HtAmsdu=0

MediaTek Confidential

© 2014 MediaTek Inc.

Page 60 of 171

0: disable 1: enable

## 3.1.59 HtAutoBa

Description: Enable or disable auto build Block Ack section with peer

Value:

iwpriv ra0 set HtAutoBa=1

0: disable 1: enable

## 3.1.60 BADecline

Description: Enable or disable decline Block Ack to peer

Value:

iwpriv ra0 set BADecline=0

0: disable 1: enable

## 3.1.61 HtProtect

Description: Enable or disable HT protect

Value:

iwpriv ra0 set HtProtect=0

0: disable 1: enable

#### 3.1.62 HtMimoPs

Description: Enable or disable HT MIMO Power saving mode

Value:

iwpriv ra0 set HtMimoPs=0

0: disable 1: enable

## 3.1.63 HtDisallowTKIP

Description: Enable or disable 11N rate with 11N AP when cipher is TKIP or WEP Value:

iwpriv ra0 set HtDisallowTKIP=0

MediaTek Confidential

© 2014 MediaTek Inc.

0: disable 1: enable

#### 3.1.64 AP2040Rescan

Description: Trigger HT20/40 coexistence to rescan

Value:

iwpriv ra0 set AP2040Rescan=1

1: trigger to rescan

### 3.1.65 HtBssCoex

Description: Enable or disable HT BSS coexistence

Value:

iwpriv ra0 set HtBssCoex=0

0: disable 1: enable

## 3.1.66 HtTxStream

Description: Set the number of spatial streams for transmission

Value:

iwpriv ra0 set HtTxStream=1 or 2 or 3

1~3: valid spatial streams

## 3.1.67 HtRxStream

Description: Set the number of spatial streams for reception

Value:

iwpriv ra0 set HtRxStream=1 or 2 or 3

1~3: valid spatial streams

## **3.1.68** BASetup

Description: Add an Originator BA entry into the BA table manually.

Value:

iwpriv ra0 set BASetup=00:0c:43:01:02:03-1

- →The six 2 digit hex-decimal number(xx) previous are the Mac address,
- →The seventh decimal number(d) is the tid value.

#### 3.1.69 BAOriTearDown

Description: Remove an Originator BA entry from the BA table manually.

Value:

iwpriv ra0 set BAOriTearDown=00:0c:43:01:02:03-1

- →The six 2 digit hex-decimal number(xx) previous are the Mac address,
- →The seventh decimal number(d) is the tid value.

# 3.1.70 BARecTearDown

Description: Remove an Recipient BA entry from the BA table manually. Value:

iwpriv ra0 set BARecTearDown=00:0c:43:01:02:03-1

- →The six 2 digit hex-decimal number(xx) previous are the Mac address,
- →The seventh decimal number(d) is the tid value.

## 3.1.71 PktAggregate

Description: Enable or disable 11B/G packet aggregation

Value:

iwpriv ra0 set PktAggregate=1

0: disable 1: enable

## 3.1.72 IEEE80211H

Description: Enable or disable IEEE 802.11h function. Spectrum management.

This field can only be enabled in A band.

Value:

iwpriv ra0 set IEEE80211H=0

0: disable 1: enable

# 3.1.73 KickStaRssiLow

Description: Set the lowest limitation for AP kicking out STA.

Value:

iwpriv ra0 set KickStaRssiLow=0

0: Disable 0 ~ -100

## 3.1.74 AssocReqRssiThres

Description: Set AssocReq RSSI Threshold to reject STA with weak signal

Value:

Iwpriv ra0 set AssocReqRssiThres=0

0: Disable 0~ -100

# 3.2 iNIC specific

## 3.2.1 QAEnable

Description: enable or disable QA test tool function.

iwpriv ra0 set QAEnable=1

0: disable 1: enable

#### 3.2.2 Console

Description: redirect console information to host.

iwpriv ra0 set Console=1

0: disable 1: enable

## 3.2.3 EfuseUploadToHost

Description: This command is specific to iNIC solution.

The content of efuse will be uploaded to the iNIC host in iNIC e2p.bin or iNIC e2p1.bin .

iwpriv ra0 set EfuseUploadToHost=1

0: disable 1: enable

## 3.2.4 tpc

Description: Thermal function will be according to criteria with current temperature to configure Ant.

Criteria Value:1~1000

default: 80

Iwpriv ra0 set tpc=80

#### 3.2.5 DfsSwAddCheck

Description: This command is used to add an entry to prevent false detection in specific range.

"ch" is the bbp dfs detection engine ID

"T\_Low" is the Radar Period low boundary to filter out.

"T\_High" is the Radar Period high boundary to filter out.

"W\_Low" is the Radar Width low boundary to filter out.

"W\_High" is the Radar Width high boundary to filter out.

iwpriv ra0 set DfsSwAddCheck=ch:T\_Low:T\_High:W\_Low:W\_high

#### Example:

iwpriv ra0 set DfsSwAddCheck=0:100:200:50:500

#### 3.2.6 DfsSwDelCheck

Description: This command is used to delete an entry which was added to filter out radar in specific range.

iwpriv ra0 set DfsSwDelCheck=ch:T\_Low:T\_High:W\_Low:W\_high

## Example:

iwpriv ra0 set DfsSwDelCheck=0:100:200:50:500

# 4 Other iwpriv Command

## 4.1 stat

Description: Show WLAN statistics

Value:

iwpriv ra0 stat

Note:

You can use "iwpriv ra0 set ResetCounter=1" to reset statistics
Also, you can use the following command line shell script to get per-second statistics.
# while [ 1 ]; do iwpriv ra0 set ResetCounter=1; sleep 1; iwpriv ra0 stat; done;

# 4.2 get site survey

Description: Show site survey result

Value:

iwpriv ra0 get\_site\_survey

Note: You need to use "iwpriv ra0 set SiteSurvey=" to collect information first

# 4.3 get\_mac\_table

Description: Show MAC addresses of connected stations

Value:

iwpriv ra0 get mac table

# 4.4 get\_ba\_table

Description: Show raw data of the BlockAck table

Value:

iwpriv ra0 get\_ba\_table

# 4.5 get\_wsc\_profile

Description: Show WPS profile information

Value:

iwpriv ra0 get\_wsc\_profile

# 4.6 e2p

Description: Read/Write EEPROM content

Value:

MediaTek Confidential © 2014 MediaTek Inc. Page 66 of 171

// Read
iwpriv ra0 e2p offset
// Write
iwpriv ra0 e2p offset=value

#### Note:

offset = hexidecimal address value = hexidecimal value

## **4.7** show

You could use iwpriv ra0 show command to display general or specific information. As to specific information, you have to turn on the corresponding function in driver config.

#### [Format]

iwpriv ra0 show [parameter]

#### [Parameter list]

- 1. driverinfo show driver version
- 2. stat show statistics counter
- 3. stainfo show MAC address of associated STAs
- 4. stacountinfo show TRx byte count of associated STAs
- 5. stasecinfo show security information of associated STAs
- 6. bainfo show BlockAck information
- 7. connStatus show AP-Client connection status
- 8. reptinfo show MAC Repeater information
- 9. wdsinfo show WDS link list
- 10. igmpinfo show all entries in the IGMP Snooping Table
- 11. mbss show MBSS PHY mode information
- 12. blockch show DFS blocked channel list

#### [Example]

# iwpriv ra0 show driverinfo Driver version: 2.7.1.6

# 5 TBD

To Be Defined.

## 6 WPS

Wi-Fi Protected Setup (WPS) also known as Wi-Fi Simple Config (WSC)

#### **Simple Config Architectural Overview**

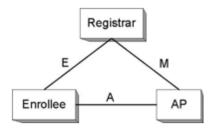

This section presents a high-level description of the Simple Config architecture. Much of the material is taken directly from the Simple Config specification.

Figure 1 depicts the major components and their interfaces as defined by Wi-Fi Simple Config Spec. There are three logical components involved: the Registrar, the access point (AP), and the Enrollee.

The **Enrollee** is a device seeking to join a WLAN domain. Once an Enrollee obtains a valid credential, it becomes a member.

A **Registrar** is an entity with the authority to issue and revoke domain credentials. A registrar can be integrated into an AP.

The AP can be either a WLAN AP or a wireless router.

Registration initiation is ordinarily accomplished by a user action such as powering up the Enrollee and, optionally, running a setup wizard on the Registrar (PC).

Note: The WLAN driver needs to set HAS\_WSC=y in order to enable WPS functions.

# 6.1 WPS Profile settings

### 6.1.1 WscConfMode

Description: Configure WPS role (bitwise OR)

Value:

WscConfMode=7

b'000: 0 Disable b'001: 1 Enrollee b'010: 2 Proxy b'100: 4 Registrar

#### 6.1.2 WscConfStatus

Description: Configure WPS state

Value:

WscConfStatus=1

1: AP is unconfigured

2: AP is configured

## 6.1.3 WscConfMethods

Description: Setup the configuration methods which Enrollee or Registrar supports

WscConfMethods=238c

Note:

Hexadecimal value only.

// Bitwise OR all values which DUT supports

0x238c = 0x2008 + 0x0280 + 0x0100 + 0x0004

Virtual Display PIN + Virtual Push Button + Keypad + Label PIN

Config Method	Value
Label PIN	0x0004
External NFC Token	0x0010
Integrated NFC Token	0x0020
NFC Interface	0x0040
Keypad	0x0100
Virtual Push Button	0x0280
Physical Push Button	0x0480
Virtual Display PIN	0x2008
Physical Display PIN	0x4008

# 6.1.4 WscKeyASCII

Description: Define WPS WPAPSK format and key length for un-configured internal WPS Registrar AP

Value:

WscKeyASCII=0

0: Hex (64-bytes)

1: ASCII (Random length)

8 ~ 63: ASCII length

# 6.1.5 WscSecurityMode

Description: Define WPS Regitrar's unconfiguraed -> configuraed security mode.

Value:

WscSecurityMode=0

0: WPA2PSK AES
1: WPA2PSK TKIP
2: WPAPSK AES
3: WPAPSK TKIP

### 6.1.6 WscDefaultSSID0

Description: Default WPS SSID for AP. After WPS process completes with Enrollee when AP acts as un-configured Registrar, AP will use this SSID as new SSID.

Value:

WscDefaultSSID0=SSID

1~32 characters

# 6.1.7 WscV2Support

Description: Enable or disable WPS v2.0 support

Value:

WscV2Support=1

0: disable 1: enable

# 6.2 WPS iwpriv command

#### 6.2.1 WscConfMode

Description: Configure WPS role (bitwise OR)

Value:

iwpriv ra0 set WscConfMode=7

b'000: 0 Disable b'001: 1 Enrollee b'010: 2 Proxy b'100: 4 Registrar

#### 6.2.2 WscConfStatus

Description: Configure WPS state

Value:

iwpriv ra0 set WscConfStatus=1

1: AP is unconfigured2: AP is configured

#### 6.2.3 WscMode

Description: Configure WPS mode

Value:

iwpriv ra0 set WscMode=1

1: PIN Mode 2: PBC Mode

#### 6.2.4 WscStatus

Description: Get WPS Configured Methods.

Value:

iwpriv ra0 set WscStatus=0

- 0: Not Used
- 1: Idle
- 2: WSC Process Fail
- 3: Start WSC Process
- 4: Received EAPOL-Start
- 5: Sending EAP-Req(ID)
- 6: Receive EAP-Rsp(ID)
- 7: Receive EAP-Req with wrong WSC SMI Vendor Id
- 8: Receive EAPReq with wrong WSC Vendor Type
- 9: Sending EAP-Req(WSC\_START)
- 10: Send M1
- 11: Received M1
- 12: Send M2
- 13: Received M2
- 14: Received M2D
- 15: Send M3
- 16: Received M3
- 17: Send M4
- 18: Received M4
- 19: Send M5
- 20: Received M5
- 21: Send M6
- 22: Received M6
- 23: Send M7
- 24: Received M7
- 25: Send M8
- 26: Received M8
- 27: Processing EAP Response (ACK)
- 28: Processing EAP Request (Done)
- 29: Processing EAP Response (Done)
- 30: Sending EAP-Fail
- 31: WSC\_ERROR\_HASH\_FAIL
- 32: WSC\_ERROR\_HMAC\_FAIL

33: WSC\_ERROR\_DEV\_PWD\_AUTH\_FAIL

34: Configured

## 6.2.5 WscPinCode

Description: Input Enrollee's Pin Code to AP-Registrar.

Value:

iwpriv ra0 WscPinCode xxxxxxxx

 $xxxxxx = \{00000000 \sim 99999999\}$ 

#### 6.2.6 WscOOB

Description: Reset WPS AP to the OOB (out-of-box) configuration.

Value:

iwpriv ra0 set WscOOB=1

0: disable1: enable

#### 6.2.7 WscGetConf

Description: Trigger WPS AP to do simple config with WPS Client.

Value:

iwpriv ra0 set WscGetConf=1

0: disable 1: enable

## 6.2.8 WscGenPinCode

Description: Randomly generate enrollee PIN code

Value:

iwpriv ra0 set WscGenPinCode=1

1

## 6.2.9 WscVendorPinCode

Description: Input vendor's Pin Code to AP-Registrar.

Value:

iwpriv ra0 set WscVendorPinCode=xxxxxxxx

xxxxxxxx: 8 digit pin code

## 6.2.10 WscSecurityMode

Description: Set WPS regitrar's unconfiguraed -> configuraed security mode.

MediaTek Confidential

© 2014 MediaTek Inc.

Page 73 of 171

Value:

iwpriv ra0 set WscSecurityMode=0

0: WPA2PSK AES 1: WPA2PSK TKIP 2: WPAPSK AES 3: WPAPSK TKIP

# 6.2.11 WscMultiByteCheck

Description: Set multi byte check is enabled or disabled.

Value:

iwpriv ra0 set WscMultiByteCheck=1

0: disable 1: enable

## 6.2.12 WscVersion

Description: Set WPS support version

Value:

iwpriv ra0 set WscVersion=10

xx: Hex value

## 6.2.13 WscVersion2

Description: Set WPS version of V2 support

Value:

iwpriv ra0 set WscVersion2=10

xx: Hex Value

## 6.2.14 WscV2Support

Description: enable or disable WPS V2.0 support

Value:

iwpriv ra0 WscV2Support=1

0: disable 1: enable

## 6.2.15 WscFragment

Description: enable or disable WPS fragment

Value:

iwpriv ra0 WscFragment=0

MediaTek Confidential

0: disable 1: enable

# 6.2.16 WscFragmentSize

Description: Set the size of WPS fragmentation.

Value:

iwpriv ra0 set WscFragmentSize=128

128~300

# 6.2.17 WscSetupLock

Description: enable or disable WPS setup lock

Value:

iwpriv ra0 set WscSetupLock=1

0: disable 1: enable

## 6.2.18 WscSetupLockTime

Description: Configure WPS setup lock time

Value:

iwpriv ra0 set WscSetupLockTime=0

0: lock forever Unit: minute

## 6.2.19 WscMaxPinAttack

Description: Configure WPS pin attack Max time.

Value:

iwpirv ra0 set WscMaxPinAttack

0:Disable 1-10

## 6.2.20 WscExtraTlvTag

Description: Add extra TLV tag to Beacon, probe response and WSC EAP messages Value:

iwpriv ra0 set WscExtraTlvTag=1088

Hex value: 0000 ~ FFFF

Example: 1088

## 6.2.21 WscExtraTlvType

Description: Define data format of extra TLV value

Value:

iwpriv ra0 set WscExtraTlvType=1

0: ASCII string1: Hex string

#### 6.2.22 WscExtraTlyData

Description: Add extra TLV data to Beacon, probe response and WSC EAP messages Value:

iwpriv ra0 set WscExtraTlvData=

ASCII string or Hex string

## 6.2.23 **WscStop**

Description: Stop WPS process.

Value:

iwpriv ra0 set WscStop

## 6.2.24 WPS iwpriv command example

#### 6.2.24.1 Disable WPS support

iwpriv ra0 set WscConfMode=0

#### 6.2.24.2 Enable WPS Function

iwpriv ra0 set WscConfMode =7 (Binary: 111)
(AP could be Registrar(0x4), Proxy(0x2) or Enrollee(0x1))

## 6.2.24.3 WPS AP SC (Simple Config) State

iwpriv ra0 set WscConfStatus=1 (AP is un-configured) iwpriv ra0 set WscConfStatus=2 (AP is configured)

## **6.2.24.4 WPS Configured Methods**

iwpriv ra0 set WscMode =1 (use PIN code) iwpriv ra0 set WscMode =2 (use PBC)

# 6.2.24.5 Input Enrollee's Pin Code to AP-Registrar

iwpriv ra0 set WscPinCode=xxxxxxxx

## 6.2.24.6 Reset WPS AP to the OOB configuration

iwpriv ra0 set WscOOB=1

(Security: WPAPSK/TKIP, psk: "RalinkInitialAPxx1234"; SC state: 0x1)

MediaTek Confidential

© 2014 MediaTek Inc.

Page 76 of 171

# 6.2.24.7 Trigger WPS AP to do simple config with WPS Client

iwpriv ra0 set WscGetConf=1

#### 6.2.24.8 AP services as Enrollee by using PIN code

iwpriv ra0 set WscMode=1
iwpriv ra0 set WscGetConf=1

#### 6.2.24.9 AP services as Enrollee by using PBC

iwpriv ra0 set WscMode=2
iwpriv ra0 set WscGetConf=1

#### 6.2.24.10 AP services as Internal Registrar using PIN code

iwpriv ra0 set WscMode=1
iwpriv ra0 set WscPinCode=xxxxxxxx (PIN code from Enrollee, len=8)
iwpriv ra0 set WscGetConf=1

#### 6.2.24.11 AP services as Internal Registrar using PBC

iwpriv ra0 set WscMode=2
iwpriv ra0 set WscGetConf=1

#### 6.2.24.12 Get WPS Profile from external registrar

iwpriv ra0 get\_wsc\_profile

# 6.3 WPS AP Setup Procedure

To run the Access Point (as Enrollee or with Registrar capabilities). The following scenarios are currently supported:

- 1. Initial Access Point (AP) setup, with the Registrar configuring the Access Point
  - 1.1. One WiFi-enabled laptop is setup as the AP acting as an Enrollee
  - 1.2. Another WiFi-enabled laptop is setup as a station acting as the Registrar
  - 1.3. Two sub cases are 1a) using EAP transport and 1b) using UPnP transport
- 2. Configuration of a WiFi client, using an AP with a built-in registrar
  - 2.1. One WiFi-enabled laptop is setup as the AP with registrar functionality Another WiFi-enabled laptop is setup as a station acting as an Enrollee
- 3. Configuration of a WiFi client using an external registrar. AP acts as a proxy and communicates with the client over EAP and with the Registrar over UPnP.
  - 3.1. One WiFi-enabled laptop is setup as a station acting as an Enrollee
  - 3.2. Second WiFi-enabled laptop is setup as the AP with proxy functionality
  - 3.3. Third laptop is setup as the registrar. The registrar and the AP are connected over Ethernet.

## 6.3.1 Running the WPS command-line application

Run the protocol from the console.

First, run UPNP deamon like below:

wscd -w /etc/xml -m 1 -d 3 & (if your xml file in /etc/xml)

MediaTek Confidential

use iwpriv command trigger wps, like below:

iwpriv ra0 set WscConfMode=7 iwpriv ra0 set WscConfStatus=1 iwpriv ra0 set WscMode=1 iwpriv ra0 set WscPinCode=31668576 iwpriv ra0 set WscGetConf=1 iwpriv ra0 set WscStatus=0

- 1. AP services as Enrollee:
  - 1.1. If AP-Enrollee SC state is 0x1, AP will restart with new configurations.
  - 1.2. If AP-Enrollee SC state is 0x2, AP sends own configurations to external-registrar and ignores configurations from external-registrar.
- 2. AP services as Registrar:
  - 2.1. If AP-Registrar SC state is 0x1, the security mode will be WPAPSK/TKIP and generate random 64bytes psk; after process, AP will restart with new security.
- 3. WPS AP only services one WPS client at a time.
  - 3.1. WPS AP only can work in ra0.
  - 3.2. After WPS configuration finishes, Ralink AP driver writes new configuration to Cfg structure and DAT file.
- 4. Write items to MBSSID Cfg structure are as below:
  - 4.1. Ssid
  - 4.2. AuthMode
  - 4.3. WepStatus
  - 4.4. PMK
  - 4.5. DefaultKeyId.
- 5. Write items to SharedKey table are as below:
  - 5.1. Key
  - 5.2. CipherAlg
- 6. Write items to DAT file are as belw:
  - 6.1. SSID
  - 6.2. AuthMode
  - 6.3. EncrypType
  - 6.4. WPAPSK
  - 6.5. WscConfStatus
  - 6.6. DefaultKeyID

Note: wscd daemon must be ported to the target platform first.

## 6.3.2 Initial AP setup with Registrar Configuring AP (EAP/UPnP)

To run command-line console in this mode do:

[Unconfigured AP] ← EAP/UPnP → [Registrar]

#### Note:

Please make sure upnp deamon is running. After the success of WPS registration, Configured AP will act as a proxy forward EAP and Upnp.)

MediaTek Confidential

© 2014 MediaTek Inc.

#### 1. PIN

- (1) on AP side
  - iwpriv ra0 set WscConfMode=7
  - iwpriv ra0 set WscConfStatus=1
  - iwpriv ra0 set WscMode=1
  - iwpriv ra0 set WscGetConf=1

## (2) on Registrar side

- When prompted for the enrollee's PIN, Enter the AP's PIN. Enter the new SSID and new Security for the AP when prompted.
- ♦ The registration process will start, and the application will display the result of the process on completion.

#### 2. PBC

#### (1) on AP side

- iwpriv ra0 set WscConfMode=7
- iwpriv ra0 set WscConfStatus=1
- iwpriv ra0 set WscMode=2
- iwpriv ra0 set WscGetConf=1

#### (2) on Registrar side

- Select push-button".
- ♦ The registration process will start, and the application will display the result of the process on completion.

The security config will be written out to the AP and registrar config files.

# 6.3.3 Adding an Enrollee to AP+Registrar (EAP)

To run command-line console in this mode do:

[AP+Registrar] ← EAP → [Client]

#### Note:

Please make sure WPS AP configure status is configured, if AP is un-configure, when WPS AP configure client, it will change configure status to configured and auth mode are WPA-PSK)

#### 1. PIN

#### (1) on AP side

- iwpriv ra0 set WscConfMode=7
- iwpriv ra0 set PinCode=31668576 (enter the enrollee's PIN, the PIN from WPS client)
- ♦ iwpriv ra0 set WscMode=1
- ♦ iwpriv ra0 set WscGetConf=1.
- ◆ The registration process will begin, and the console will display the result of the process on completion.

## (2) on Client (Enrollee) side

- Select PIN process.
- The process will start, and the application will display the result of the process on completion

#### 2. PBC

#### (1) on AP side

- ♦ iwpriv ra0 set WscConfMode=7
- iwpriv ra0 set WscMode=2
- iwpriv ra0 set WscGetConf=1.
- ♦ The registration process will start, and the application will display the result of the process on completion.

# (2) on Client (Enrollee) side

Select PBC process.

MediaTek Confidential

© 2014 MediaTek Inc.

Page 79 of 171

◆ The process will start, and the application will display the result of the process on completion

If the registration is successful, on the client will be re-configured with the new parameters, and will connect to the AP with these new parameters.

## 6.3.4 Adding an Enrollee with Eternal Registrar (UPnP/EAP)

To run command-line console in this mode do:

#### [Registrar] ← PnP → [AP] ← EAP → [Client]

#### 1. PIN

#### (1) on Registrar side

- ♦ When prompted for the enrollee's PIN, Enter the enrollee's PIN.
- AP Nothing to be selected..
- ◆ The registration process will begin, and the application will display the result of the process on completion.

#### (2) on Client (Enrollee) side

- ◆ Select PIN process
- The process will start, and the application will display the result of the process on completion

## 2. PBC

#### (1) on Registrar side

- ◆ Select "push-button".
- AP Nothing to be selected.
- ◆ The registration process will begin, and the application will display the result of the process on completion.

#### (2) on Client (Enrollee) side

- ◆ Select PBC process
- ♦ The registration process will start, and the application will display the result of the process on completion.

# 6.3.5 WPS Config status

#### **6.3.5.1** Over View

The 'Simple Config State' of WPS attribute in WPS IEs contained in beacon and probe response indicates if a device is configured. If an AP is shipped from the factory in the Not-Configured state (Simple Config State set to 0x01), then the AP must transition to the Configured state (Simple Config State set to 0x02) if any of the following occur:

1. Configuration by an external registrar.

The AP sends the WSC\_Done message in the External Registrar configuration process.

2. Automatic configuration by internal registrar.

The AP receives the WSC\_Done response in the Enrollee Registration Process from the first Enrollee. Note:

The internal registrar waits until successful completion of the protocol before applying the automatically generated credentials to avoid an accidental transition from unconfigured to configured in the case that a neighbouring device tries to run WSC before the real enrollee, but fails. A failed attempt does not change the configuration of the AP, nor the Simple Config State.

Manual configuration by user.

A user manually configures the AP using whatever interface(s) it provides to modify any one of the following:

- the SSID
- the encryption algorithm
- the authentication algorithm
- any key or pass phrase

If the AP is shipped from the factory in the Not Configured state (Simple Config State set to 0x01), then a factory reset must revert the Simple Config State to Not Configured.

If the AP is shipped from the factory pre-configured with WPA2-Personal mixed mode and a randomly generated key, the Simple Config State may be set to 'Configured' (0x2) to prevent an external registrar from overwriting the factory settings. A factory reset must restore the unit to the same configuration as when it was shipped.

# 6.4 Basic operation of Ralink WPS AP

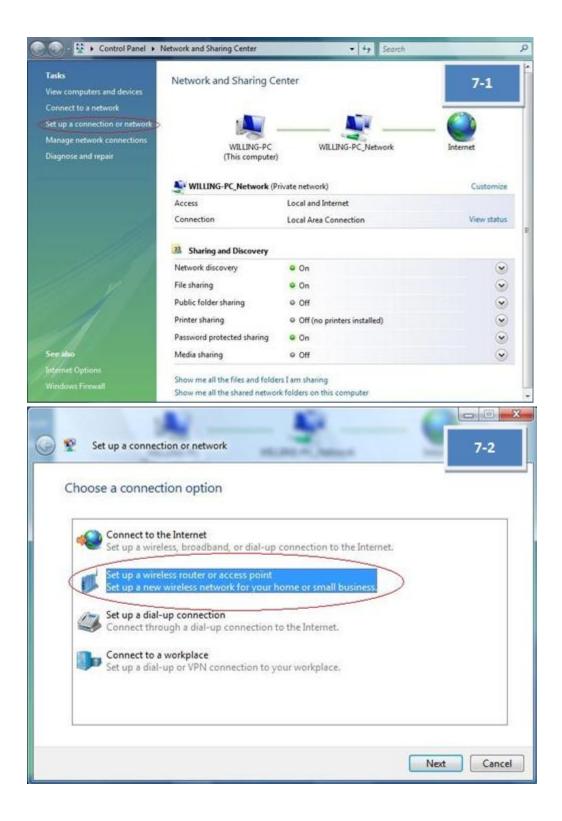

# 6.4.1 Configure APUT using PIN method through a WLAN external Registrar

- 1. [Ralink AP] Turn on the Ralink AP
- 2. [Ralink AP] To change AP ability "iwpriv ra0 set WscConfMode=7"
- 3. [Ralink AP] To change from configured to un-configured state: "iwpriv ra0 set WscConfStatus=1"
- 4. [Ralink AP] To change config method to PIN "iwpriv ra0 set WscMode=1"
- [Ralink AP] Trigger Ralink AP start process WPS protocol "iwpriv ra0 set WscGetConf=1"
- 6. [Intel WPS STA] The Registrar on Intel STA will be configured with the new parameters (SSID = "scaptest4.1.2ssid" and WPA(2)-PSK="scaptest4.1.2psk") which should be entered when prompted
- 7. [Intel WPS STA] Read AP's PIN from console and enter the PIN at Intel STA.
- 8. [Intel WPS STA] Verify that Intel STA successes to ping to Ralink AP
- 9. [Ralink STA] Manually configure Ralink STA with the new parameters (SSID = "scaptest4.1.2ssid" and WPA (2)-PSK = "scaptest4.1.2psk").
- 10. [Intel WPS STA] Verify that Intel STA successes to ping to Ralink STA

# 6.4.2 Configure APUT using PIN method through a wired external registrar

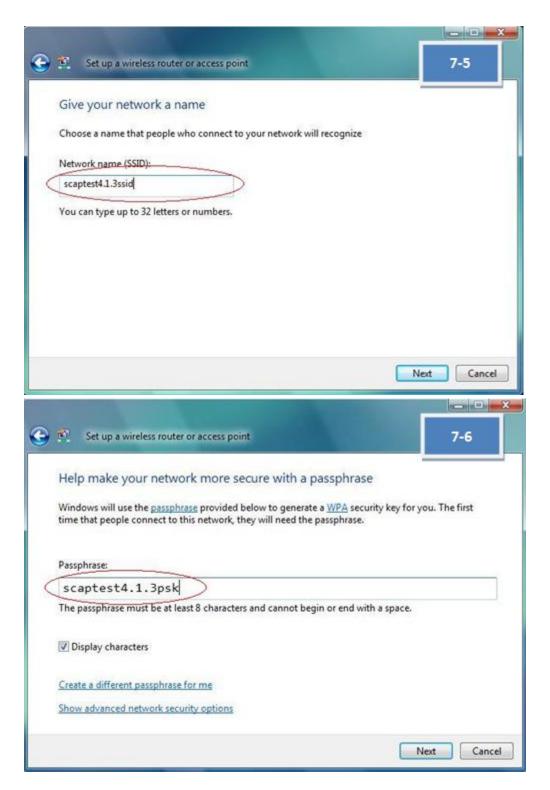

- 1. [Ralink AP] Turn on the Ralink AP
- 2. [Ralink AP] Connect the Ethernet cable between AP and extern registrar(Windows Vista) and make sure you can pin our device from extern registrar first!
- 3. [Ralink AP] To change AP ability "iwpriv ra0 set WscConfMode=7"
- 4. [Ralink AP] To change from configured to un-configured state: "iwpriv ra0 set WscConfStatus=1"
- 5. [Ralink AP] To change config method to PIN "iwpriv ra0 set WscMode=1"
- 6. [Ralink AP] Trigger Ralink AP start process WPS protocol "iwpriv ra0 set WscGetConf=1"
- 7. [Microsoft STA] The Registrar on Microsoft STA will be configured with the new wireless configuration settings (SSID = "scaptest4.1.3ssid" and WPA (2)-PSK="scaptest4.1.3psk"), which should be entered when prompted.

Please refer to below figures [7-1] to [7-6].

 [Microsoft STA] - Read AP's PIN from console and enter the PIN at Microsoft STA.

Please refer to below figures [8-1] to [8-2].

- 1. [Ralink STA] Manually configure Ralink STA with the new parameters (SSID = "scaptest4.1.3ssid" and WPA (2)-PSK passphrase= "scaptest4.1.3psk").
- 2. [Ralink STA] Verify that Ralink STA successes to ping to Microsoft STA.

# 6.4.3 Add devices using external Registrars

- 1. [Ralink AP] Turn on the APUT.
- 2. [Ralink STA] Turn on the Ralink STA.

- 3. [Ralink STA] Push PIN button.
- 4. [Microsoft STA] Search will be configure enrollee (you can in control->network and internet->network and sharing center->add a device to the network). Enter the enrollee's PIN(Ralink STA) at Microsoft STA when prompted.
- 5. [Ralink AP] Do not thing.
- 6. [Ralink STA] Verify that Ralink STA successes to ping Ralink A.

# 6.4.4 How to know WPS AP services as Internal Registrar, Enrollee or Proxy

It depends on the content of EAP-Response/Identity from WPS Client.

- ⇒ When identity is "WFA-SimpleConfig-Registrar-1-0": WPS AP would service as Enrollee. (After set trigger command)
- ⇒ When identity is "WFA-SimpleConfig-Enrollee-1-0": WPS AP would service as Internal Registrar and Proxy. Without trigger command, WPS AP services as proxy only.

#### 6.4.5 How to know WPS AP PinCode

Use ioctl query RT\_OID\_WSC\_PIN\_CODE OID to get AP PinCode.

#### 6.4.6 Notes for WPS

- 1. AP services as Enrollee:
  - 1.1. If AP-Enrollee SC state is 0x1, AP's configuration is changeable and will restart with new configurations.
  - 1.2. If AP-Enrollee SC state is 0x2, AP's configuration is un-changeable. AP sends own configurations to external-registrar and ignores configurations from external-registrar.
- 2. AP services as Registrar:
  - 2.1. If AP-Registrar SC state is 0x1, the security mode will be WPAPSK/TKIP and generate random 64bytes psk; after process, AP will restart with new security.
- 3. AP services as Proxy:
  - 3.1. The value of SC state has no effect in proxy mode.
  - 3.2. WPS AP only services one WPS client at a time.
  - 3.3. WPS AP only can work in ra0.

# 6.4.7 Compile flag for WPS AP

WFLAGS += -DWSC SUPPORT

## 6.4.8 WPS related Document

- 1. Wi-Fi Protected Setup Specification v1.0 (member only)
- 2. Wi-Fi Protected Setup White Paper
- 3. Introducing Wi-Fi Protected Setup
- 4. WSC Linux\* Reference Implementation
- 5. How to Use Windows Connect Now Configuration to Enable Simple Setup for Consumer Wi-Fi Networks [WinHEC 2006; 5.83 MB]

#### 6.5 UPNP Daemon HOWTO

#### 6.5.1 Build WPS UPnP Daemon

## **Requirements:**

- 1. Linux platform
- 2. Ralink wireless driver version which support WPS
- 3. Libupnp
  - ⇒ You can download the libupnp source code from the following URL: http://upnp.sourceforge.net/
  - ⇒ libupnp-1.3.1 is preferred version. For other versions, you may need to patch our modification to the library yourself.
- **4.** POSIX thread library
  - ⇒ Both libupnp and our WPS UPnP daemon need the POSIX thread library, following are recommended pthread library version.
    - For uCLibc, need the version >= 0.9.27
    - For GLIBC, need the version >= 2.3.2
  - ⇒ If your pthread library is older than upper list, you may need to upgrade it.

#### **Build and Run:**

- Modify the "\$(work\_directory)/wsc\_upnp/Makefile" and change the compile flags depends on your target platform.
  - ⇒ Ex. For arm-Linux target platform, you may need to set the following fags:
    - CROSS COMPILE = arm-Linux-
    - TARGET HOST = arm-Linux
    - WIRELESS\_H\_INCLUDE\_PATH = /usr/src/kernels/2.6.11-1.1369\_FC4-smp-i686/include/
- **2.** Modify the "\$(work\_directory)/wsc\_upnp/libupnp-1.3.1/Makefile.src" and change the configure parameters.
  - ⇒ Ex. For big-endian system, you may need to add CFAGS as following:
    - ./configure --host=\$(TARGET\_HOST) CFLAGS="-mbig-endian"
- 3. Compile it
  - ⇒ Run "make" in "\$(work\_directory)/wsc\_upnp", after successful compilation, you will get an execution file named "wscd".
- 4. Install
  - ⇒ Create a sub-directory named "xml" in the "/etc" of your target platform
  - ⇒ Copy all files inside in "\$(work directory)/wsc upnp/xml" to "/etc/xml"
    - Copy the "wscd" to the target platform.
- 5. Run it
  - ⇒ Before run it, be sure the target platform already has set the default route or has a route entry for subnet 239.0.0.0 (For UuPnP Multicast). Or the WPS daemon will failed when do initialization.
  - ⇒ Now you can run it by following command:
    - /bin/wscd -m 1 -d 3

#### **Related Document:**

# 6.6 WPS Command & OID Example

# 6.6.1 Iwpriv command without argument

# iwpriv command:

```
iwpriv ra0 wsc_start
iwpriv ra0 wsc_stop
iwpriv ra0 wsc_gen_pincode
```

#### OID:

#### **Example:**

```
memset(&lwreq, 0, sizeof(lwreq));
sprintf(lwreq.ifr_name, "ra0", 3);
iwreq.u.mode = WSC_STOP;
/* Perform the private ioctl */
if(ioctl(skfd, RTPRIV_IOCTL_SET_WSC_PROFILE_U32_ITEM, &lwreq) < 0)
{
fprintf(stderr, "Interface doesn't accept private ioctl...\n");</pre>
```

#### 7.1 Introduction

IEEE 802.11e amendment is to provide basic QoS features to 802.11 network and Wi-Fi Multimedia (WMM) is a WFA interoperability certification based on the IEEE 802.11e standard. WMM prioritizes wireless traffic according to four Access Categories, including Voice (VO), Video (VI), Best Effort (BE) and Background (BK).

# 7.2 WMM iwpriv command

# 7.2.1 WmmCapable

Description: Enable or disable WMM QoS function

Value:

iwpriv ra0 set WmmCapable=1

0: disable 1: enable

## 7.3 Parameters in RT2860AP.dat

## 7.3.1 WmmCapable

Description: Enable or disable WMM QoS function

Value:

WmmCapable=1

0: disable 1: enable

Note: Only WmmCapable has iwpriv command support

# 7.3.2 APSDCapable

Description: WMM Automatic Power Save Delivery (APSD) function configuration Value:

APSDCapable=0

0: disable 1: enable

#### 7.3.3 APAifsn

Description: AP arbitration interframe space number configuration

Value:

APAifsn=3;7;1;1

AC\_BE;AC\_BK;AC\_VI;AC\_VO

## 7.3.4 APCwmin

Description: AP contention window minimum (exponent) configuration

Value:

APCwmin=4;4;3;2

AC BE;AC BK;AC VI;AC VO

## 7.3.5 APCwmax

Description: AP contention window maximum (exponent) configuration

Value:

APCwmax=6;10;4;3

AC\_BE;AC\_BK;AC\_VI;AC\_VO

# **7.3.6 APTxop**

Description: AP Transmit Opportunity configuration (unit: 32µs)

Value:

APTxop=0;0;94;47

AC\_BE;AC\_BK;AC\_VI;AC\_VO

#### 7.3.7 **APACM**

Description: AP Admission Control Mandatory configuration

Value:

APACM=0;0;0;0

AC\_BE;AC\_BK;AC\_VI;AC\_VO

## 7.3.8 BSSAifsn

Description: STA arbitration interframe space number configuration

Value:

BSSAifsn=3;7;2;2

## 7.3.9 BSSCwmin

Description: STA contention window minimum (exponent) configuration

Value:

BSSCwmin=4;4;3;2

AC\_BE;AC\_BK;AC\_VI;AC\_VO

#### **7.3.10** BSSCwmax

Description: STA contention window maximum (exponent) configuration

Value:

BSSCwmax=10;10;4;3

AC\_BE;AC\_BK;AC\_VI;AC\_VO

## **7.3.11** BSSTxop

Description: STA Transmit Opportunity configuration (unit: 32µs)

Value:

BSSTxop=0;0;94;47

AC\_BE;AC\_BK;AC\_VI;AC\_VO

#### 7.3.12 **BSSACM**

Description: STA Admission Control Mandatory configuration

Value:

BSSACM=0;0;0;0

AC\_BE;AC\_BK;AC\_VI;AC\_VO

# 7.3.13 AckPolicy

Description: Acknowledgement policy configuration

Value:

AckPolicy=0;0;0;0

0: Normal Ack or Implicit Block Ack Request

1: No Ack

2: No explicit acknowledgement

3: Block Ack

AC\_BE;AC\_BK;AC\_VI;AC\_VO

# 7.4 How to Run WMM test

- 1. WmmCapable=1
- 2. TxBurst=0

3.	Parameters for AP	
	APAifsn=3;7;1;1	// AC_BE;AC_BK;AC_VI;AC_VO
	APCwmin=4;4;3;2	// AC_BE;AC_BK;AC_VI;AC_VO
	APCwmax=6;10;4;3	// AC_BE;AC_BK;AC_VI;AC_VO
	APTxop=0;0;94;47	// AC_BE;AC_BK;AC_VI;AC_VO
	APACM=0;0;0;0	// AC_BE;AC_BK;AC_VI;AC_VO
4.	Parameters for all STAs	
	BSSAifsn=3;7;2;2	// AC_BE;AC_BK;AC_VI;AC_VO
	BSSCwmin=4;4;3;2	// AC_BE;AC_BK;AC_VI;AC_VO
	BSSCwmax=10;10;4;3	// AC_BE;AC_BK;AC_VI;AC_VO
	BSSTxop=0;0;94;47	// AC_BE;AC_BK;AC_VI;AC_VO
	BSSACM=0;0;0;0	// AC_BE;AC_BK;AC_VI;AC_VO
5.	Ack policy	
	AckPolicy=0;0;0;0	// AC_BE;AC_BK;AC_VI;AC_VO;

All default values comply with the Wi-Fi spec.

#### 8.1 **IEEE802.11d**

#### **Regulatory Domains**

To turn on IEEE802.11d, just fill up the parameter of 'CountryCode', according to ISO3166 code list. This parameter can work in A/B/G band.

The parameter of "CountryCode' needs to match with 'CountryRegion' or 'CountryRegionABand' depends on A or B/G band

Wi-Fi test requirement for IEEE802.11d

Country code IE (0x07) includes in beacon frame and probe response

Power constraint IE (32) includes in beacon frame and probe response

## 8.2 IEEE802.11h

## **Spectrum and Transmit Power Management**

- 1. To turn on IEEE802.11h, just fill up the parameters of 'IEEE80211H', 'AutoChannelSelect' as 1, WirelessMode set as 3 to support A band. This parameter can work in only A band.
- 2. Use 'CSPeriod' to determine how many beacons before channel switch
- 3. Driver will turn off BBP tuning temporarily in radar detection mode
- 4. If turn on IEEE802.11h, AP will have 60sec to do channel available check, and will not send beacon and can not be connect.
- 5. Wi-Fi test requirement for IEEE802.11h
  - Force AP switch channel, AP will stop beacon transmit between 15 sec
  - At least five beacon includes channel switch announcement IE (37 )in beacon frame
- 6. ETSI test requirement, please refer to ETSI EN 301 893 for V1.2.3 detail

Table D.1: DFS requirement values

Parameter	Value
Channel Availability Check Time	60 s
Channel Move Time	10 s
Channel Closing Transmission Time	260 ms

Table D.2: Interference Threshold values, Master

Ma	ximum Transmit Power	Value		
		(see note)		
	≥ 200 mW	-64 dBm		
	< 200 mW	-62 dBm		
NOTE:	NOTE: This is the level at the input of the receiver			
assuming a 0 dBi receive antenna.				

Table D.3: Interference Threshold values, Slave

Ma	aximum Transmit Power	Value		
		(see note)		
	≥ 200 mW	-64 dBm		
	< 200 mW	N/A		
NOTE: This is the level at the input of the receiver assuming a 0 dBi receive antenna.				

# 9.1 All possible combinations of security policy

Type I. Without Radius

(IEEE8021X has to be False)

	OPEN	SHARED	WEPAUTO
NONE	V	X	X
WEP	V	V	V
802.1x daemon	Off	Off	Off

Type II. With Radius (Non-WiFi standard)

(IEEE8021X has to be True)

	OPEN
NONE	٧
WEP	٧
802.1x daemon	On

#### Type III. With WFA WPA/WPA2

(IEEE8021X has to be False)

	WPAPSK	WPA2PSK	WPAPSK WPA2PSK	WPA	WPA2	WPA WPA2
TKIP	V	V	V	V	V	V
AES	V	V	V	V	V	V

# 9.2 Security iwpriv command

## 9.2.1 AuthMode

Description: WLAN security authentication mode

Value:

iwpriv ra0 set AuthMode=OPEN

OPEN Open system
SHARED Shared key system

WEPAUTO Auto switch between OPEN and SHARED

WPAPSK WPA Pre-Shared Key (Infra)
WPA2PSK WPA2 Pre-Shared Key (Infra)

WPAPSKWPA2PSK WPAPSK/WPA2PSK mixed mode (Infra)
WPA WPA Enterprise mode (Need wpa\_supplicant)
WPA2 WPA2 Enterprise mode (Need wpa\_supplicant)
WPA1WPA2 WPA/WPA2 mixed mode (Need wpa\_supplicant)

## 9.2.2 EncrypType

Description: WLAN security encryption type

Value:

iwpriv ra0 set EncrypType=NONE

NONE No encryption

WEP Wired Equivalent Privacy

TKIP Temporal Key Integrity Protocol
AES Advanced Encryption Standard

TKIPAES Mixed cipher

# 9.2.3 DefaultKeyID

Description: Default key ID (WEP only)

Value:

iwpriv ra0 set DefaultKeyID=1

The ID range is 1~4

# 9.2.4 Key1

Description: Key 1 string (WEP only)

Value:

iwpriv ra0 set Key1=aaaaa

10 or 26 hexadecimal characters 5 or 13 ASCII characters

# 9.2.5 Key2

Description: Key 2 string (WEP only)

Value:

iwpriv ra0 set Key2=aaaaa

10 or 26 hexadecimal characters 5 or 13 ASCII characters

## 9.2.6 Key3

Description: Key 3 string (WEP only)

Value:

iwpriv ra0 set Key3=aaaaa

10 or 26 hexadecimal characters 5 or 13 ASCII characters

## 9.2.7 Key4

Description: Key 4 string (WEP only)

Value:

iwpriv ra0 set Key4=aaaaa

10 or 26 hexadecimal characters 5 or 13 ASCII characters

## **9.2.8 WPAPSK**

Description: WLAN security password for TKIP/AES

Value:

iwpriv ra0 set WPAPSK=12345678

8~63 ASCII characters 64 hexadecimal characters

## 9.2.9 WpaMixPairCipher

Description: Providing more flexible combination of cipher suite Value:

iwpriv ra0 set WpaMixPairCipher=WPA TKIP WPA2 AES

WPA\_AES\_WPA2\_TKIPAES
WPA\_AES\_WPA2\_TKIP
WPA\_TKIP\_WPA2\_AES
WPA\_TKIP\_WPA2\_TKIPAES
WPA\_TKIPAES\_WPA2\_AES
WPA\_TKIPAES\_WPA2\_TKIPAES
WPA\_TKIPAES\_WPA2\_TKIPAES

## 9.3 Parameters in RT2860AP.dat

#### 9.3.1 AuthMode

Description: WLAN security authentication mode

Value:

AuthMode=OPEN

OPEN Open system
SHARED Shared key system

WEPAUTO Auto switch between OPEN and SHARED

WPAPSK WPA Pre-Shared Key (Infra)
WPA2PSK WPA2 Pre-Shared Key (Infra)

WPAPSKWPA2PSK WPAPSK/WPA2PSK mixed mode (Infra)
WPA WPA Enterprise mode (Need wpa\_supplicant)
WPA2 WPA2 Enterprise mode (Need wpa\_supplicant)

MediaTek Confidential © 2014 MediaTek Inc. Page 96 of 171

## 9.3.2 EncrypType

Description: WLAN security encryption type

Value:

EncrypType=NONE

NONE No encryption

WEP Wired Equivalent Privacy

TKIP Temporal Key Integrity Protocol
AES Advanced Encryption Standard

TKIPAES Mixed cipher

#### 9.3.3 IEEE8021X

Description: Enable or disable 8021X-WEP mode

Value:

IEEE8021X=0

0: disable 1: enable

this field is enabled only when

-WEP or Radius-NONE mode on, otherwise must disable.

# 9.3.4 RekeyMethod

Description: Configuration of rekey method for WPA/WPA2

Value:

RekeyMethod=DISABLE

TIME: Time rekey
PKT: Packet rekey
DISABLE: Disable rekey

## 9.3.5 RekeyInterval

Description: Rekey interval configuration for WPA/WPA2

Value:

RekeyInterval=0

The value range is 0 ~ 0x3FFFFF. (Unit: 1 second or 1000 packets)

Use 0 to disable rekey.

#### 9.3.6 PMKCachePeriod

Description: PMK cache life time configuration for WPA/WPA2

Value:

PMKCachePeriod=10

The value range is 0 ~ 65535. (Unit: minute)

## **9.3.7 WPAPSK**

Description: WLAN security password for TKIP/AES

Value:

WPAPSK=01234567

8~63 ASCII characters 64 hexadecimal characters

# 9.3.8 DefaultKeyID

Description: Default key ID (WEP only)

Value:

DefaultKeyID=1

The ID range is 1~4

# **9.3.9 Key1Type**

Description: Key 1 type

Value:

Key1Type=0

0: Hexadecimal

1: ASCII

## 9.3.10 Key1Str

Description: Key 1 string

Value:

Key1Str=

10 or 26 hexadecimal characters 5 or 13 ASCII characters

# 9.3.11 **Key2Type**

Description: Key 2 type

Value:

Key2Type=0

MediaTek Confidential

© 2014 MediaTek Inc.

Page 98 of 171

0: Hexadecimal

1: ASCII

# 9.3.12 Key2Str

Description: Key 2 string

Value:

Key2Str=

10 or 26 hexadecimal characters 5 or 13 ASCII characters

# 9.3.13 **Key3Type**

Description: Key 3 type

Value:

Key3Type=0

0: Hexadecimal

1: ASCII

# 9.3.14 Key3Str

Description: Key 3 string

Value:

Key3Str=

10 or 26 hexadecimal characters 5 or 13 ASCII characters

# 9.3.15 **Key4Type**

Description: Key 4 type

Value:

Key4Type=0

0: Hexadecimal

1: ASCII

# 9.3.16 Key4Str

Description: Key 4 string

Value:

Key4Str=

10 or 26 hexadecimal characters 5 or 13 ASCII characters

MediaTek Confidential

© 2014 MediaTek Inc.

Page 99 of 171

# 9.3.17 WpaMixPairCipher

Description: Providing more flexible combination of cipher suite

Value:

WpaMixPairCipher=WPA\_TKIP\_WPA2\_AES

WPA\_AES\_WPA2\_TKIPAES
WPA\_AES\_WPA2\_TKIP
WPA\_TKIP\_WPA2\_AES
WPA\_TKIP\_WPA2\_TKIPAES
WPA\_TKIPAES\_WPA2\_AES
WPA\_TKIPAES\_WPA2\_TKIPAES
WPA\_TKIPAES\_WPA2\_TKIPAES

## 9.3.18 **PreAuth**

Description: Enable or disable WPA2 pre-authentication mode

Value:

PreAuth=0

0: disable 1: enable

# 9.4 New WFA Security Rules

		2013/12/31	2014/1/1			
Personal						
WPA-PSK Only	TKIP	V	X			
WFA-F5K Offly	AES	Δ	X			
WPA2-PSK Only	TKIP	Δ	X			
WFAZ-F5K-Offly	AES	V	$\mathbf{V}$			
WPA-PSK/WPA2-PSK Mixed						
WPA-PSK	TKIP	V	V			
WIA-ISK	AES	Δ	X			
WPA2-PSK	TKIP	Δ	X			
WFAZ-F5K	AES	V	V			
Enterprise						
WPA Only	TKIP	V	X			
WIROILY	AES	Δ	X			
WPA2 Only	TKIP	Δ	X			
WFA2 Only	AES	V	$\mathbf{v}$			
WPA/WPA2 Mixed						
WPA	TKIP	V	V			
WIA	AES	Δ	X			
WPA2	TKIP	Δ	X			
WIAZ	AES	V	V			

V = Allowed by WFA

X = Prohibited by WFA

 $\Delta$  = It was not prohibited by WFA, but no test case use it.

Note: Please check 9.5.5 for the correct settings of mixed mode.

# 9.5 iwpriv command examples

Please specify SSID at last step to trigger the AP restart procedure which would reload new security settings.

## **9.5.1 OPEN/NONE**

- 1. iwpriv ra0 set AuthMode=OPEN
- 2. iwpriv ra0 set EncrypType=NONE
- 3. iwpriv ra0 set IEEE8021X=0
- 4. iwpriv ra0 set SSID=myownssid

# 9.5.2 SHARED/WEP

- 1. iwpriv ra0 set AuthMode=SHARED
- 2. iwpriv ra0 set EncrypType=WEP
- 3. iwpriv ra0 set Key1=0123456789
- 4. iwpriv ra0 set DefaultKeyID=1
- 5. iwpriv ra0 set IEEE8021X=0
- 6. iwpriv ra0 set SSID=myownssid

#### 9.5.3 WPAPSK/TKIP

- 1. iwpriv ra0 set AuthMode=WPA2PSK
- 2. iwpriv ra0 set EncrypType=TKIP
- 3. iwpriv ra0 set IEEE8021X=0
- 4. iwpriv ra0 set SSID=myownssid
- 5. iwpriv ra0 set WPAPSK=myownpresharedkey
- 6. iwpriv ra0 set DefaultKeyID=2
- 7. iwpriv ra0 set SSID=myownssid

Note: Deprecated by WFA since 2014.01.01

## 9.5.4 WPA2PSK/AES

- 1. iwpriv ra0 set AuthMode=WPA2PSK
- 2. iwpriv ra0 set EncrypType=AES
- 3. iwpriv ra0 set IEEE8021X=0
- 4. iwpriv ra0 set SSID=MySsid
- 5. iwpriv ra0 set WPAPSK=MyPassword
- 6. iwpriv ra0 set DefaultKeyID=2
- 7. iwpriv ra0 set SSID=MySsid

## 9.5.5 WPAPSKWPA2PSK/TKIPAES

- 1. iwpriv ra0 set AuthMode=WPAPSKWPA2PSK
- 2. iwpriv ra0 set EncrypType=TKIPAES
- 3. iwpriv ra0 set IEEE8021X=0
- 4. iwpriv ra0 set WpaMixPairCipher=WPA\_TKIP\_WPA2\_AES
- 5. iwpriv ra0 set SSID=MySsid
- 6. iwpriv ra0 set WPAPSK=MyPassword
- 7. iwpriv ra0 set DefaultKeyID=2
- 8. iwpriv ra0 set SSID=MySsid

rt2860apd - IEEE 802.1X Authenticator (user space utility)

rt2860apd is an optional user space component for the SoftAP driver. It provides IEEE 802.1X Authenticator feature when you choose to use external RADIUS Authentication Server (AS).

# 10.1 IEEE 802.1X features in rt2860apd

IEEE Std. 802.1X-2001 is a standard for port-based network access control. It introduces an extensible mechanism for authenticating and authorizing users. rt2860apd implements part of IEEE 802.1X features which help AS authorizing Supplicant and also prove itself a valid Authenticator to AS. Please be noted that rt2860apd does not include the state machine for key management. The key management function is included in the SoftAP driver. rt2860apd relays the frames between the Supplicant and the AS. Not until either one timeout or Success or Fail frame indicated does rt2860apd finish the authentication process. The port control entity is implemented in the SoftAP driver.

# 10.2 How to start rt2860apd

Please run "rt2860apd" in your system script.

# 10.3 rt2860apd configuration for IEEE 802.1X

When rt2860apd starts, it reads the configuration file to derive parameters. For any changes to make, one need to first edit the configuration file, then restart rt2860apd.

Please add 4 required parameters in the configuration file for WLAN SoftAP driver (RT2860AP.dat/RT2870AP.dat).

RADIUS\_Server='192.168.2.3'
RADIUS Port='1812'

RADIUS\_Key='password'

own\_ip\_addr='your\_ip\_addr'

The word in ' ' must be replaced with your own correct setting. Please make sure 'your\_ip\_addr' and RADIUS\_Server is connected and RADIUS\_Server's IAS (or related) services are started.

## The optional variables as below,

- session timeout interval is for 802.1x reauthentication setting.
  - set to zero to disable 802.1x reauthentication service for each session.
  - session\_timeout\_interval unit is second and must be larger than 60.
  - For example,
    - session\_timeout\_interval = 120
      reauthenticate each session every 2 minutes.
    - session\_timeout\_interval = 0
       disable reauthenticate service.
- EAPifname is assigned as the binding interface for EAP negotiation.

- Its default value is "br0". But if the wireless interface doesn't attach to bridge interface or the bridge interface name isn't "br0", please modify it.
- For example,
  - EAPifname=br0
- PreAuthifname is assigned as the binding interface for WPA2 Pre-authentication.
  - Its default value is "br0". But if the ethernet interface doesn't attach to bridge interface or the bridge interface name isn't "br0", please modify it.
  - For example,
    - PreAuthifname=br0

# 10.4 Support Multiple RADIUS Servers

We use complier option to turn on/off the multiple RADIUS servers for 802.1x.

If you want to enable the feature, make sure that "MULTIPLE\_RADIUS" is defined in Makefile. Default is disabled. Besides, you must modify the file "RT2860AP.dat" to co-operate with 802.1x. We extend some variables to support individual RADIUS server IP address, port and secret key for MBSS.

```
E.g.
RADIUS_Server=192.168.2.1;192.168.2.2;192.168.2.3;192.168.2.4
RADIUS Port=1811;1812;1813;1814
RADIUS_Key=ralink_1;ralink_2;ralink_3;ralink_4
RADIUS_Server=10.10.10.1; 10.10.10.2; 10.10.10.3; 10.10.10.4
RADIUS Port=1812:1812:1812:1812
RADIUS_Key=ralink_5;ralink_6;ralink_7;ralink_8
Or
RADIUS_Key1=ralink_1;
RADIUS_Key1=ralink_5;
RADIUS_Key2=ralink_2;
RADIUS Key2=ralink 6;
RADIUS Key3=ralink 3;
RADIUS_Key3=ralink_7;
RADIUS_Key4=ralink_4;
RADIUS_Key4=ralink_8;
```

For backward compatibility, the driver parses "RADIUS\_Key" or RADIUS\_KeyX"(X=1~4) for radius key usage. But the paramter "RADIUS\_Key" has the first priority.

This implies,

The RADIUS server IP of ra0 is 192.168.2.1, its port is 1811 and its secret key is ralink 1.

The RADIUS server IP of ra1 is 192.168.2.2, its port is 1812 and its secret key is ralink 2.

The RADIUS server IP of ra2 is 192.168.2.3, its port is 1813 and its secret key is ralink\_3.

The RADIUS server IP of ra3 is 192.168.2.4, its port is 1814 and its secret key is ralink\_4. If your wireless interface prefix is not "ra", please modify these variables.

Setup Multiple RADIUS Server failover by iwpriv:

```
iwpriv ra0 set RADIUS_Server=192.168.1.1;192.168.1.2 iwpriv ra0 set RADIUS_Port=1812;1813 iwpriv ra0 set RADIUS_Key=mediatek123;mediatek456
```

# 10.5 Enhance dynamic wep keying

In OPEN-WEP with 802.1x mode, the authentication process generates broadcast and unicast key. The unicast key is unique for every individual client so it is always generated randomly by 802.1x daemon. But the broadcast key is shared for all associated clients; it can be pre-set manually by users or generated randomly by 802.1x daemon.

Through the parameter "DefaultKeyID" and its corresponding parameter "KeyXStr"(i.e. X = the value of DefaultKeyID) in RT2860Ap.dat, the 802.1x daemon would use it as the broadcast key material. But if the corresponding parameter "KeyXStr" is empty or unsuitable, the broadcast key would be generated randomly by the 802.1x daemon.

The 802.1x daemon need to read RT2860AP.dat to decide whether the broadcast key is generated randomly or not, so please update the RT2860AP.dat and restart rt2860apd if those correlative parameters are changed.

# 10.6 Examples for Radius server configuration

## **10.6.1** Example I

This is a step-by-step guide to set SoftAP using WPA security mechanism. Assume RT2800 SoftAP has ip address 192.168.1.138, AS (Authentication Server) has IP address 192.168.1.1, Radius Secret is myownkey.

- 1. load WLAN SoftAP driver
  - \$insmod rt2860ap.o
- 2. First edit configuration file with correct value, esp. the following parameters that relate to the authentication features of RT2800AP.dat

```
RADIUS_Server=192.168.1.1
RADIUS_Port=1812
RADIUS_Key=myownkey
own_ip_addr=192.168.1.138
```

- 3. start RT2800apd daemon by typing.
  - \$rt2860apd
- 4. iwpriv ra0 set AuthMode=WPA
- 5. iwpriv ra0 set EncrypType=TKIP
- 6. iwpriv ra0 set DefaultKeyID=2
- 7. iwpriv ra0 set IEEE8021X=0
- 8. iwpriv ra0 set SSID=myownssid

## 10.6.2 Example II

Change 802.1x settings to WPA with TKIP, using 802.1x authentication.

1. Modify 4 parameters

```
RADIUS_Server=192.168.2.3
RADIUS_Port=1812
RADIUS_Key=password
own_ip_addr=192.168.1.123
```

MediaTek Confidential

© 2014 MediaTek Inc.

Page 105 of 171

in the RT2860AP.dat and save.

- 2. iwpriv ra0 set AuthMode=WPA
- iwpriv ra0 set EncrypType=TKIP
- 4. iwpriv ra0 set IEEE8021X=0
- 5. iwpriv ra0 set SSID=myownssid

Note:

Step 4 restarts the rt2860apd, and is essential.

## 10.6.3 Example III

Change setting to OPEN/WEP with 802.1x.

- 1. iwpriv ra0 set AuthMode= OPEN
- 2. iwpriv ra0 set EncrypType= WEP
- 3. iwpriv ra0 set IEEE8021X=1

Note:

"IEEE8021X=1" only when Radius-WEP or Radius-NONE mode on, otherwise must "IEEE8021X=0".

## **10.6.4 Example V**

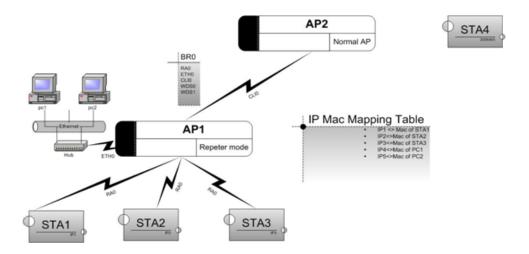

Change setting to OPEN/NONE with 802.1x.

- iwpriv ra0 set AuthMode= OPEN
- 2. iwpriv ra0 set EncrypType= NONE
- 3. iwpriv ra0 set IEEE8021X=1

Note:

"IEEE8021X=1" only when Radius-WEP or Radius-NONE mode on , otherwise must "IEEE8021X=0".

The AP-Client function provides a simulated and virtual STA interface while the original AP interface is working simultaneously. Its application is usually a wireless repeater or a wireless extender. AP-Client mainly provides a 1-to-N MAC address mapping mechanism such that multiple stations connected to the AP can transparently communicate with another AP, which we usually call RootAP. When AP-Client function is enabled, besides the original AP interface named ra0, a virtual interface named apcli0 will be created. In a repeater application, the software bridge, like br0, is used to relay packets between these two interfaces. The following figure shows the common network topology and operation module of our AP-Client function.

AP1 is an Access Point which enabled AP-Client and therefore has two wireless interfaces, ra0 and apclio, providing the AP and station function respectively. AP2 is just a tranditional Access Point that provides normal AP function. In the figure, you can see that STA1 associated to AP1 and STA4 associated to AP2. In the old days, if STA1 wants to communicate with STA4, AP1 and AP2 must have some kind of connection between them to relay traffic, like Ethernet LAN (wired) or WDS (wireless). Now with the new AP-Client feature, AP1 can use the simulated STA interface apclio to connect to AP2, thus creating the link, and then STA1 can communicate with STA4 transparently and wired stations connected to AP1 through Ethernet could also communicate with STA4.

Here are some reminders for you before using AP-Client.

- AP-Client only supports the following protocols due to the limitation of 1-to-N MAC address mapping mechanism
  - All IP-based network applications
  - ARP
  - DHCP
  - PPPoE
- The last hexadecimal number of the MAC address must be a multiple of 2

# 11.1 How to Setup AP-Client

- Turn on APCLI\_SUPPORT in driver config
- Use "ifconfig apclio up" to bring up your AP-Client interface
- In a repeater application, you may use the following commands to bridge ra0 and apcli0

MediaTek Confidential

© 2014 MediaTek Inc.

Page 107 of 171

- brctl addif br0 ra0
- brctl addif br0 apcli0
- The security policy support for AP-Client include
  - OPEN
  - SHARED (WEP)
  - WPAPSK (TKIP, AES)
  - WPA2PSK (TKIP, AES)
- Please be noted that AP-Client is also a virtual interface. When you use AP-Client with MBSSID simultaneously, AP-Client will consume one position and the parameter "BssidNum" should be larger than 1 and less than 7 (1 < BssidNum < 7)</li>
- Use "iwpriv apcli0 show connStatus" to display connection status with RootAP

## 11.2 Parameters in RT2860AP.dat

# 11.2.1 ApCliEnable

Description: Enable or disable AP-Client function

Value:

ApCliEnable=1

0: disable 1: enable

# 11.2.2 ApCliSsid

Description: Configure the target/RootAP SSID which AP-Client wants to connect with Value:

ApCliSsid=target\_ssid

target\_ssid: 1~32 characters

## 11.2.3 ApCliBssid

Description: Configure the target BSSID which AP-Client wants to join

Value:

ApCliBssid=00:11:22:33:44:55

Note: It is an optional command. Users can use this command to indicate the desired BSSID. Otherwise, AP-Client would get correct BSSID according to configured SSID automatically.

## 11.2.4 ApCliAuthMode

Description: AP-Client authentication mode configuration

Value:

ApCliAuthMode=OPEN

OPEN SHARED WPAPSK WPA2PSK

# 11.2.5 ApCliEncrypType

Description: AP-Client encryption type configuration

Value:

ApCliEncrypType=NONE

NONE

**WEP** 

**TKIP** 

**AES** 

# 11.2.6 ApCliWPAPSK

Description: WPA/WPA2 Pre-Shared Key configuration

Value:

ApCliWPAPSK=12345678

8~63 ASCII characters 64 hexadecimal characters

# 11.2.7 ApCliDefaultKeyID

Description: Default key index configuration

Value:

ApCliDefaultKeyID=1

The ID range is 1~4

# 11.2.8 ApCliKey1Type

Descripion: Set the WEP key type of AP-Client for key index 1

Value:

ApCliKey1Type=0

0: Hexadecimal

1: ASCII

### 11.2.9 ApCliKey1Str

Description: Set the WEP key string of AP-Client for key 1

Value:

MediaTek Confidential © 2014 MediaTek Inc. Page 109 of 171

ApcliKey1Str=012345678

10 or 26 hexadecimal characters 5 or 13 ASCII characters

## 11.2.10 ApCliKey2Type

Descripion: Set the WEP key type of AP-Client for key index 2

Value:

ApCliKey2Type=0

0: Hexadecimal

1: ASCII

# 11.2.11 ApCliKey2Str

Description: Set the WEP key string of AP-Client for key 2

Value:

ApcliKey2Str=012345678

10 or 26 hexadecimal characters

5 or 13 ASCII characters

### 11.2.12 ApCliKey3Type

Descripion: Set the WEP key type of AP-Client for key index 3

Value:

ApCliKey3Type=0

0: Hexadecimal

1: ASCII

# 11.2.13 ApCliKey3Str

Description: Set the WEP key string of AP-Client for key 3

Value:

ApcliKey3Str=012345678

10 or 26 hexadecimal characters

5 or 13 ASCII characters

## 11.2.14 ApCliKey4Type

Descripion: Set the WEP key type of AP-Client for key index 4

Value:

ApCliKey4Type=0

MediaTek Confidential

© 2014 MediaTek Inc.

Page 110 of 171

0: Hexadecimal

1: ASCII

### 11.2.15 ApCliKey4Str

Description: Set the WEP key string of AP-Client for key 4

Value:

ApcliKey4Str=012345678

10 or 26 hexadecimal characters

5 or 13 ASCII characters

### 11.2.16 ApCliTxMode

Description: Fixed transmission mode configuration

Value:

ApCliTxMode=HT

cck|CCK, ofdm|OFDM, ht|HT

### 11.2.17 ApCliTxMcs

Description: AP-Client Tx MCS configuration

Value:

ApCliTxMcs=33

0~15, 32: Fixed MCS 33: Auto MCS

## 11.2.18 ApCliWscSsid

Description: Configure the SSID which AP-Client wants to do WPS negotiation

Value:

ApCliWscSsid=target\_ssid

targer\_ssid: 1~32 characters

# 11.3 AP-Client iwpriv command

### 11.3.1 ApCliEnable

Description: Enable or disable AP-Client function

Value:

MediaTek Confidential

© 2014 MediaTek Inc.

Page 111 of 171

iwpriv apcli0 set ApCliEnable=0

0: disable 1: enable

# 11.3.2 ApCliSsid

Description: Configure the target/RootAP SSID which AP-Client wants to connect with Value:

iwpriv apcli0 set ApCliSsid=target\_ssid

target\_ssid: 1~32 characters

### 11.3.3 ApCliBssid

Description: Configure the target BSSID which AP-Client wants to join

Value:

iwpriv apcli0 set ApCliBssid=00:11:22:33:44:55

Note: It is an optional command. Users can use this command to indicate the desired BSSID. Otherwise, AP-Client would get correct BSSID according to configured SSID automatically.

# 11.3.4 ApCliAuthMode

Description: AP-Client authentication mode configuration

Value:

iwpriv apcli0 set ApCliAuthMode=OPEN

OPEN

**SHARED** 

**WPAPSK** 

WPA2PSK

## 11.3.5 ApCliEncrypType

Description: AP-Client encryption type configuration

Value:

iwpriv apcli0 set ApCliEncrypType=NONE

NONE

**WEP** 

**TKIP** 

**AES** 

### 11.3.6 ApCliWPAPSK

Description: WPA/WPA2 Pre-Shared Key configuration

Value:

iwpriv apcli0 set ApCliWPAPSK=12345678

8~63 ASCII characters 64 hexadecimal characters

# 11.3.7 ApCliDefaultKeyID

Description: Default key index configuration

Value:

iwpriv apcli0 set ApCliDefaultKeyID=1

The ID range is 1~4

## 11.3.8 ApCliKey1

Description: Set the WEP key string of AP-Client for key 1

Value:

iwpriv apcli0 set ApcliKey1=012345678

10 or 26 hexadecimal characters 5 or 13 ASCII characters

## 11.3.9 **ApCliKey2**

Description: Set the WEP key string of AP-Client for key 2 Value:

iwpriv apcli0 set ApcliKey2=012345678

10 or 26 hexadecimal characters 5 or 13 ASCII characters

### 11.3.10 ApCliKey3

Description: Set the WEP key string of AP-Client for key 3

Value:

iwpriv apcli0 set ApcliKey3=012345678

10 or 26 hexadecimal characters 5 or 13 ASCII characters

# 11.3.11 ApCliKey4

Description: Set the WEP key string of AP-Client for key 4

Value:

iwpriv apcli0 set ApcliKey4=012345678

10 or 26 hexadecimal characters

5 or 13 ASCII characters

# 11.3.12 ApCliTxMode

Description: Fixed transmission mode configuration

Value:

iwpriv apcli0 set ApCliTxMode=HT

CCK OFDM HT

# 11.3.13 ApCliTxMcs

Description: AP-Client Tx MCS configuration

Value:

iwpriv apcli0 set ApCliTxMcs=33

0~15, 32: Fixed MCS 33: Auto MCS

### 11.3.14 ApCliWscSsid

Description: Configure the SSID which AP-Client wants to do WPS negotiation

Value:

iwpriv apcli0 set ApCliWscSsid=target\_ssid

targer\_ssid: 1~32 characters

### 11.3.15 ApCliAutoConnect

Description: Enable or disable the auto-connection function to find the configured SSID

Value:

iwpriv ra0 set ApCliAutoConnect=1

0: disable 1: enable

Note: APCLI\_AUTO\_CONNECT\_SUPPORT must be turned on

### **12 WDS**

A Wireless Distribution System is a system enabling the wireless interconnection of acess points. Each WDS AP needs to be in the same channel, using the same encryption type.

Actually, there is no test plan to ensure the inter-operability of all WDS products from different Vendors. Mediatek's implementation provides two modes of AP-to-AP connectivity. One is **Bridge mode**, in which WDS APs communicate only with each other and do not allow wireless stations to access them. The other is **Repeater mode**, in which WDS APs communicate with each other and with wireless stations.

In case you want to have an auto-learning WDS peer, we also provide the **Lazy mode** in which you do not need to thoroughly configure the WDS settings. However, be noted that you cannot configure all APs to be in Lazy mode, otherwise no 4-address frame will be transmitted at all and auto-learning would be impossible. This means that there should be at least one AP being configured to Bridge mode or Repeater mode.

# 12.1 How to Steup WDS

1. Edit the driver profile in each WDS peer

WDS Peer-A with the MAC address 00:0C:43:aa:bb:cc

- WdsEnable=3
- WdsPhyMode=HTMIX;
- WdsList=00:0C:43:11:22:33;
- WdsEncrypType=NONE;

WDS Peer-B with the MAC address 00:0C:43:11:22:33

- WdsEnable=3
- WdsPhyMode=HTMIX;
- WdsList=00:0C:43:aa:bb:cc;
- WdsEncrypType=NONE;
- 2. Edit your networking script file, like bridge\_setup.sh, according to the number of WDS link. Add "brctl addif br0 wds0" and "ifconfig wds0 0.0.0.0" to relative places
- 3. Use "iwpriv ra0 show wdsinfo" to display WDS link information

# 12.2 WDS Security

WDS security is PSK-only, and it does not support mixed mode, like WPAPSKWPA2PSK.

When WDS is in Lazy mode, all WDS links (wds0 ~ wds3) shall share the same encryption type and key material (referring to wds0 settings). Otherwise, each WDS link has its own security settings. No matter what WDS mode you use, it has nothing to do with the encryption of the main BSSID (ra0).

### WdsKey:

It is used for all WDS interfaces and supports only AES and TKIP configuration. If you want to use WEP, key settings will be retrieved from the main BSSID.

### Wds0Key/Wds1Key/Wds2Key/Wds3Key:

They are used to configure key settings for each WDS interface.

The following example is to create one WDS link (wds0) with AES encryption.

WdsEnable=3

WdsPhyMode=HTMIX;HTMIX;HTMIX;HTMIX

WdsList=00:0c:43:12:34:56;

WdsEncrypType=AES;NONE;NONE;NONE

Wds0Key=12345678

Wds1Key=

Wds2Key=

Wds3Key=

### 12.3 Parameters in RT2860AP.dat

### 12.3.1 WdsEnable

Description: WDS function configuration

Value:

WdsEnable=0

- 0: Disable Disable WDS function.
- 1: Restrict mode Same as Repeater mode.
- 2: Bridge mode Enable WDS and work like a bridge.

The MAC address of peer WDS APs should be configured in the "WdsList" field.

In this mode, AP is just a bridge and will not send any beacon and will not respond to any probe request packet. Therefore STA will not be able to connect with it.

3: Repeater mode - Enable WDS and work like a repeater.

The MAC address of peer WDS APs should be configured in the "WdsList" field.

4: Lazy mode - Enable WDS function.

It automatically learns from 4-address format frames sent by the WDS peer and you do not have to configure WdsList manually.

### 12.3.2 WdsList

Description: WDS peer MAC address configuration

Value:

WdsList=00:10:20:30:40:50;

The maximum WDS link number is 4.

wds0;wds1;wds2;wds3

### 12.3.3 WdsEncrypType

Description: WDS encryption configuration

Value:

WdsEncrypType=NONE;

The option includes NONE, WEP, TKIP and AES.

### Example:

WdsEncrypType=OPEN;WEP;TKIP;AES

The encrptytion of wds0 is OPEN The encrptytion of wds1 is WEP The encrptytion of wds2 is TKIP The encrptytion of wds3 is AES

# 12.3.4 WdsKey

Description: WDS key configuration

Value:

WdsKey=12345678

8 ~ 63 ASCII characters (eg: 12345678) for TKIP or AES

64 hexadecimal characters for TKIP or AES

WdsKey is kept for backward-compatibility and it only supports TKIP and AES. You can use either WdsKey or Wds[0-4]Key but not both.

Note: Combinations of WDS security mode

EncrypType	WdsEncrypType	WdsEncrypType of the WDS peer	Note
NONE	NONE	NONE	
WEP	WEP	WEP	Using legacy key setting method
TKIP	TKIP	TKIP	WDS's key is from WdsKey
TKIP	AES	AES	WDS's key is from WdsKey
AES	TKIP	TKIP	WDS's key is from WdsKey
AES	AES	AES	WDS's key is from WdsKey
TKIPAES	TKIP	TKIP	WDS's key is from WdsKey
TKIPAES	AES	AES	WDS's key is from WdsKey

### 12.3.5 Wds0Key

Description: WDS key for Link-0

Value:

Wds0Key=12345678

10 or 26 hexadecimal characters (eg: 1234567890) for WEP

5 or 13 ASCII characters (eg: 12345) for WEP

 $8 \sim 63$  ASCII characters (eg: 12345678) for TKIP or AES

64 hexadecimal characters for TKIP or AES

### 12.3.6 Wds1Key

Description: WDS key for Link-1

Value:

Wds1Key=12345678

MediaTek Confidential

© 2014 MediaTek Inc.

Page 119 of 171

10 or 26 hexadecimal characters (eg: 1234567890) for WEP

5 or 13 ASCII characters (eg: 12345) for WEP

8 ~ 63 ASCII characters (eg: 12345678) for TKIP or AES

64 hexadecimal characters for TKIP or AES

### 12.3.7 Wds2Key

Description: WDS key for Link-2

Value:

Wds2Key=12345678

10 or 26 hexadecimal characters (eg: 1234567890) for WEP

5 or 13 ASCII characters (eg: 12345) for WEP

8 ~ 63 ASCII characters (eg: 12345678) for TKIP or AES

64 hexadecimal characters for TKIP or AES

### 12.3.8 Wds3Key

Description: WDS key for Link-3

Value:

Wds3Key=12345678

10 or 26 hexadecimal characters (eg: 1234567890) for WEP

5 or 13 ASCII characters (eg: 12345) for WEP

8 ~ 63 ASCII characters (eg: 12345678) for TKIP or AES

64 hexadecimal characters for TKIP or AES

### 12.3.9 WdsPhyMode

Description: WDS link physical mode configuration

Value:

WdsPhyMode=HTMIX;

The option includes CCK, OFDM, HTMIX and GREENFIELD.

Example:

WdsPhyMode=CCK;OFDM;HTMIX;GREENFIELD

The PHY mode of wds0 is CCK
The PHY mode of wds1 is OFDM
The PHY mode of wds2 is HTMIX
The PHY mode of wds3 is GREENFIELD

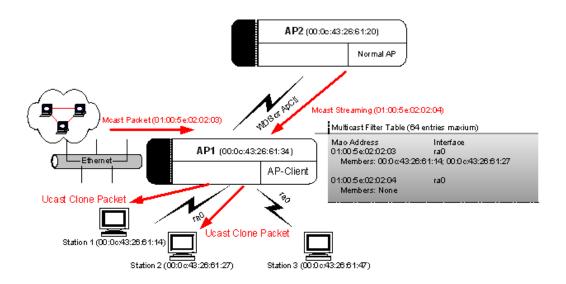

### **13.1** Basic

Please check the following two Wiki links.

- http://en.wikipedia.org/wiki/Multicast address
- http://en.wikipedia.org/wiki/Internet\_Group\_Management\_Protocol

IGMP Snooping provides a mechanism converting multicast traffic into unicast traffic. When AP receives incoming multicast traffic, the conversion would be done based on an IGMP Snooping table (Multicast Filter Table).

# 13.2 Introduction to IGMP Snooping Table

An IGMP Snooping table (a.k.a. Multicast Filter Table) entry consists of 3 components, Group-ID (Multicast MAC Address), Network-Interface and Member-List. Taking above figure for example, you can see that Multicast Filter Table of AP1 has two table entries. One is "01:00:5e:02:02:03" with two members on interface ra0 and the other is "01:00:5e:02:02:04" without any member on interface ra0.

In our implementation, AP will automatically maintain the Multicast Filter Table through packet snooping. The IGMP-Membership-Report packets sent from connected stations would be checked and parsed. You can also manually add and delete an entry through iwpriv command.

# 13.3 Multicast Packet Parsing Process

When AP receives multicast packets, it will check whether the multicast destination address matches any Group-ID in the Multicast Filter Table. AP will drop the packet if no match found. Otherwise, there are two cases how AP handles a multicast packet. The first one is that Member-List of the matching entry is empty and then AP just forwards multicast packets to all stations connected to the Network-

Interface. In the second case, there are members in the Member-List and AP will do the MC-to-UC conversion based on the membership.

Taking the previous figure for example, AP1 received an Ethernet multicast packet with Group-ID being 01:00:5e:02:02:03. Firstly AP1 checked the Multicast Filter Table and found the first entry matched. Therefore, AP1 cloned every multicast packet into two unicast packets destined to Station 1 and Station 2 respectively.

In the same figure, a multicast streaming sent from AP2 to AP1 with Group-ID 01:00:5e:02:02:04 was forwarded to all stations connected to AP1 (ra0) since the matching entry had no member at all.

### < Multicast Filter Table Example>

Group-ID	Network-Interface	Member-List
01:00:5e:02:02:03	ra0	00:0c:43:26:61:14 (Station 1)
		00:0c:43:26:61:27 (Station 2)
01:00:5e:02:02:04	ra0	

# 13.4 Parameters in RT2860AP.dat

## 13.4.1 IgmpSnEnable

Description: Enable or disable IGMP Snooping function

Value:

IgmpSnEnable=1

0: disable 1: enable

Note: Please make sure that IGMP\_SNOOP\_SUPPORT is turned on in driver config

# 13.5 IGMP Snooping iwpriv command

# 13.5.1 IgmpSnEnable

Description: Enable or disable IGMP Snooping function

Value:

iwpriv ra0 set IgmpSnEnable=1

0: disable 1: enable

### 13.5.2 IgmpAdd

Description: Create a new group or add a new member to the existing group Format:

// Create a new group <Group-ID> which can be a MAC address or an IP address

MediaTek Confidential

© 2014 MediaTek Inc.

Page 122 of 171

# iwpriv ra0 set IgmpAdd=<Group-ID> // Add a new member to the existing group. [Member] can only be a MAC address iwpriv ra0 set IgmpAdd=<Group-ID-[Member]-...>

#### Value:

```
// Create a new group via either IP or MAC address
iwpriv ra0 set lgmpAdd=226.2.2.3
iwpriv ra0 set lgmpAdd=01:00:5e:02:02:03

// Add a new member to the existing group
iwpriv ra0 set lgmpAdd=226.2.2.3-00:0c:43:26:61:11

// Add 2 new members to the existing group
iwpriv ra0 set lgmpAdd=01:00:5e:02:02:03-00:0c:43:26:61:27-00:0c:43:26:61:28
```

# 13.5.3 IgmpDel

Description: Delete a group or remove a member from the existing group Format:

```
// Delete a group <Group-ID> which can be a MAC address or an IP address iwpriv ra0 set IgmpDel=<Group-ID>
// Remove a member from the existing group. [Member] can only be a MAC address iwpriv ra0 set IgmpDel=<Group-ID-[Member]-...>
```

### Value:

```
// Delete a new group via either IP or MAC address iwpriv ra0 set IgmpDel=226.2.2.3 iwpriv ra0 set IgmpDel=01:00:5e:02:02:03

// Remove a member from the existing group iwpriv ra0 set IgmpDel=226.2.2.3-00:0c:43:26:61:11

// Remove members from the existing group iwpriv ra0 set IgmpDel=01:00:5e:02:02:03-00:0c:43:26:61:27-00:0c:43:26:61:28
```

# 14 MAC Repeater

The MAC Repeater is a variation of the original AP-Client funcation and it acts as a wireless proxy for its clients. The repeater will create a corresponding upstream connection to the RootAP for each downstream client connected to it. An upstream connection is created according to its own wireless capability and security mode. When a client disconnects from the repeater, the repeater must also disconnect its corresponding upstream connection with the RootAP. All communication between downstream clients and upstream RootAP utilizes one "AP-Client" interface on the repeater.

For example, if there are 3 clients connected to the repeater, 3 upstream connections will be created accordingly. Besides these "proxy connection", the repeater itself would also create a connection with RootAP. Therefore, in this case there would be totally 3 downstream and 4 upstream connections.

Please be noted that MAC Repeater has the following limitation.

- Roaming of STAs between different BSSs is not supported
- WPA2-Enterprise Security is not supported
- Supported protocols: IPv4 / ARP / DHCP
- The MAC Repeater supports up to 16 clients
- Impact CPU utilization due to parsing all received packets from the STA and all multicast and broadcast packets

# 14.1 MAC Repeater iwpriv command

### 14.1.1 MACRepeaterEn

Description: Enable or disable MAC Repeater function

Value:

iwpriv ra0 set MACRepeaterEn=1

0: disable 1: enable

## **14.1.2** Example

- iwpriv ra0 set MACRepeaterEn=1
- ifconfig apcli0 up
- brctl addif br0 apcli0
- iwpriv apcli0 set ApCliEnable=0
- iwpriv apcli0 set ApCliAuthMode=OPEN
- iwpriv apcli0 set ApCliEncrypType=NONE
- iwpriv apcli0 set ApCliSsid=RootAP SSID
- iwpriv apcli0 set ApCliEnable=1

# 14.2 Parameter in RT2860AP.dat

# 14.2.1 MACRepeaterEn

Description: Enable or disable the MAC Repeater function.

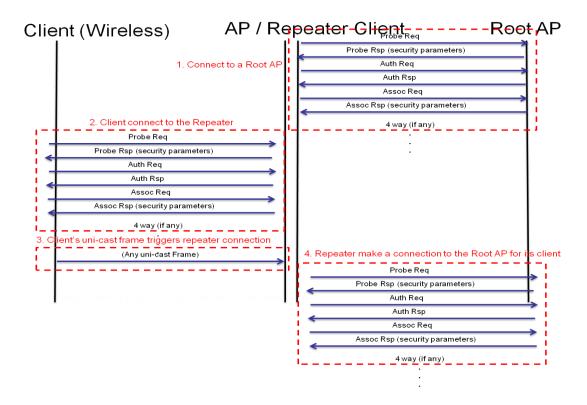

Value:

MACRepeaterEn=0

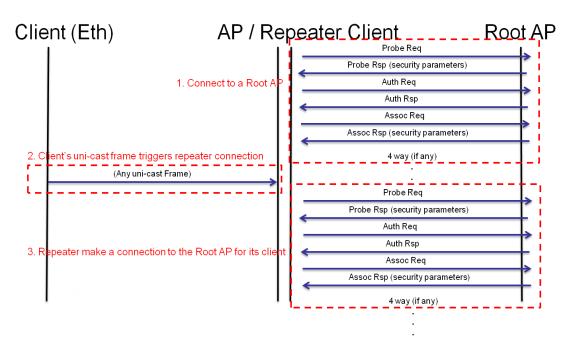

0: disable 1: enable

# 14.3 Management Frame Flow

### 14.3.1 Wireless client

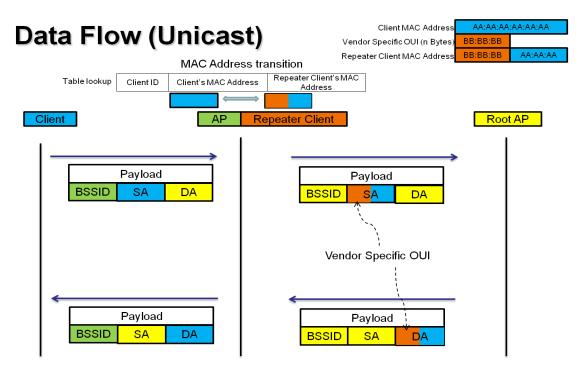

### 14.3.2 Ethernet client

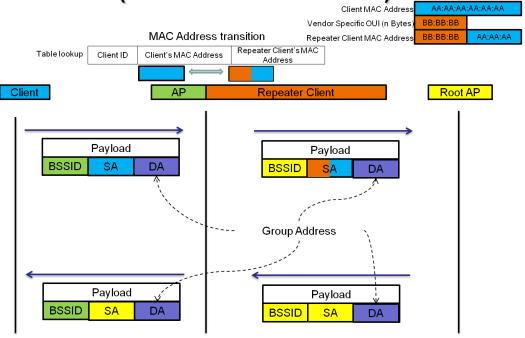

### 14.4 Data Frame Flow

### **14.4.1** Unicast

### 14.4.2 Multicast / Broadcast

Data Flow (Multicast / Broadcast)

### **15 PMF**

PMF stands for Protected Management Frame and IEEE 802.11w is the PMF standard. Its objective is to increase the security of 802.11 management frames.

# 15.1 PMF iwpriv command

### **15.1.1 PMFMFPC**

Description: Enable or disable Protection Management Frame Capable

Value:

iwpriv ra0 set PMFMFPC=1

0: disable 1: enable

### **15.1.2 PMFMFPR**

Description: Enable or disable Protection Management Frame Required

Value:

iwpriv ra0 set PMFMFPR=1

0: disable 1: enable

### 15.1.3 PMFSHA256

Description: Enable or disable use SHA256 for Encryption

Value:

iwpriv ra0 set PMFSHA256=1

0: disable 1: enable

Note: SHA stands for Secure Hash Algorithm

### 15.2 Parameters in RT2860AP.dat

## **15.2.1 PMFMFPC**

Description: Disable or enable Protection Management Frame Capable

Value:

PMFMFPC=0

0: Disable

1: Enable

### **15.2.2 PMFMFPR**

Description: Disable or enable Protection Management Frame Required

Value:

PMFMFPR=0

0: Disable
1: Enable

### 15.2.3 PMFSHA256

Description: Disable or enable use SHA256 for Encryption

Value:

PMFSHA256=0

0: Disable 1: Enable

# 15.3 Wi-Fi PMF Testing Note

# 15.3.1 DUT Requirement

PMF is a mandatory testing item to TGac but an optional one to TGn. Actually you can refer to the following table for the correct combination in a dual band router.

Combination	11ac <mark>5GHz</mark>	11n <mark>5GHz</mark>	11n 2.4GHz
Correct	PMF supported	PMF supported	PMF supported
Not acceptable	PMF supported	PMF supported	PMF Not Available
Correct	PMF supported	PMF Not Available	PMF Not Available
Not acceptable	PMF supported	PMF Not Available	PMF supported

# 15.3.2 PMF Test Section 4.3.3.3

Verification of CCMP to protect transmitted unicast deauthentication/disassociation frames

- iwpriv ra0 set PMFMFPC=1
- iwpriv ra0 set PMFMFPR=0
- iwpriv ra0 set PMFSHA256=0
- iwpriv ra0 set SSID=PMF-4.3.3.3
- iwpriv ra0 set DisConnectSta=00:0C:43:35:93:00

### 15.3.3 PMF Test Section 4.4

Verify use of BIP (Broadcast Integrity Protocol) to protect broadcast management frames

- iwpriv ra0 set PMFMFPC=1
- iwpriv ra0 set PMFMFPR=0
- iwpriv ra0 set PMFSHA256=0
- iwpriv ra0 set SSID=PMF-4.4
- iwpriv ra0 set DisConnectAllSta=2

### 16 MBSSID

The Multiple BSSID (MBSSID) function is a feature providing additional virtual WLANs which look like real WLANs to users. Its common application is to create one Main and several Guest Networks simultaneously. You may setup each BSSID with different configuration.

# 16.1 How to Setup

Please turn on MBSS\_SUPPORT in driver config.

We also suggest turn on NEW\_MBSSID\_MODE which changes how the driver creates extended MAC addresses for these virtual BSSID.

### 16.2 Parameter in RT2860AP.dat

### 16.2.1 BssidNum

Description: Multiple BSSID number configuration

Value:

BssidNum=1

1/2/4/8/16

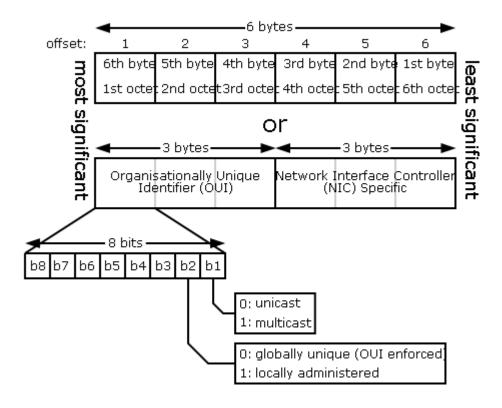

### Note:

- 1. It depends on MBSS SUPPORT
- 2. It should be placed before other configuration in the profile
- 3. 16-BSSID is supported only in new products

# 16.3 Important Note

### 16.3.1 MAC Address Format

The following MAC address format figure is from <a href="http://en.wikipedia.org/wiki/MAC\_address">http://en.wikipedia.org/wiki/MAC\_address</a> and all subsequent discussion is based on this format.

### 16.3.2 Old MBSSID Mode

As to main BSSID, the 1st byte of its MAC address should be:

- Multiple of 2 for 2-BSSID
- Multiple of 4 for 4-BSSID
- Multiple of 8 for 8-BSSID

Taking BssidNum=4 for example, address extension would be done on 1<sup>st</sup> byte.

• ra0: 00:0c:43:00:00:00 00 is multiple of 4

ra1: 00:0c:43:00:00:01
 ra2: 00:0c:43:00:00:02
 ra3: 00:0c:43:00:00:03
 01 comes from (1<sup>st</sup> byte 0x00) + 1
 02 comes from (1<sup>st</sup> byte 0x00) + 2
 03 comes from (1<sup>st</sup> byte 0x00) + 3

### Other possible address extension:

Multiple of 4	1st BSSID	2nd BSSID	3rd BSSID	4th BSSID
0x00	AA-BB-CC-DD-EE-F0	AA-BB-CC-DD-EE-F1	AA-BB-CC-DD-EE-F2	AA-BB-CC-DD-EE-F3
0x04	AA-BB-CC-DD-EE-F4	AA-BB-CC-DD-EE-F5	AA-BB-CC-DD-EE-F6	AA-BB-CC-DD-EE-F7
0x08	AA-BB-CC-DD-EE-F8	AA-BB-CC-DD-EE-F9	AA-BB-CC-DD-EE-FA	AA-BB-CC-DD-EE-FB
0x0C	AA-BB-CC-DD-EE-FC	AA-BB-CC-DD-EE-FD	AA-BB-CC-DD-EE-FE	AA-BB-CC-DD-EE-FF

Please be noted that all these MAC addresses should be reserved because they are global MAC addresses.

### 16.3.3 New MBSSID Mode

Since there is MAC address reservation problem in the old MBSSID mode, we provide the new MBSSID mode which will utilize b2 of 6<sup>th</sup> byte of a virtual MAC address to claim it as locally administered. Address extension would be done on 6<sup>th</sup> byte.

As to main BSSID, the b[4:2] of 6<sup>th</sup> byte of its MAC address should be:

- Multiple of 2 for 2-BSSID
- Multiple of 4 for 4-BSSID
- Multiple of 8 for 8-BSSID

### Taking BssidNum=4 for example:

```
• ra0: 00:0c:43:00:00:00
```

ra1: 02:0c:43:00:00:00
 ra2: 06:0c:43:00:00:00
 ra3: 0a:0c:43:00:00:00
 ra3: 0a:0c:43:00:00:00
 ra3: 0a:0c:43:00:00:00
 ra3: 0a:0c:43:00:00:00
 ra3: 0a:0c:43:00:00:00

### 16.3.4 Enhanced New MBSSID Mode

The enhanced new MBSSID mode removes the restriction of using the 6<sup>th</sup> byte since OUI (Consists of 6<sup>th</sup>, 5<sup>th</sup>, 4<sup>th</sup> bytes) is not controllable. Local Administration bit would be turned on and address extension would be done on 3<sup>rd</sup> byte. This is supported only in new products.

### Taking BssidNum=4 for example:

ra0: 00:0c:43:00:00:00
 00 is multiple of 4
 ra1: 02:0c:43:00:00:00
 ra2: 02:0c:43:01:00:00
 ra3: 02:0c:43:02:00:00
 ra3: 02:0c:43:02:00:00
 ra3: 02:0c:43:02:00:00
 ra3: 02:0c:43:02:00:00

# 16.4 Configuration

BssidNum can be configured only through profile and you must restart the interface to make it to work. Other parameters can be configured dynamically through iwpriv command per interface. MBSSID-supported parameters are SSID, AuthMode, EncrypType, WPAPSK, etc.

### **16.4.1 Example**

BssidNum=4 SSID=SSID\_A;SSID\_B;SSID\_C;SSID\_D AuthMode=OPEN;SHARED;WPAPSK;WPA2PSK EncrypType=NONE;WEP;TKIP;AES

# 17 Concurrent A+G Settings

Below table is brief example for two interfaces.

For example, Linux HotPlug system found new device would create one driver instance (create new space for driver image) for new device to hold private information (memory consumed).

Interfa	Interface Bring Up Sequence								
NIC#	NIC# Sequence		WDS						
INIO#	Sequence	Normal	1	2	3	4			
Two	ifconfig ra0 up	ra0	wds0	wds1	wds2	wds3			
TWO	ifconfig ra1 up	ra1	wds4	wds5	wds6	wds7			
		,					•		
NIC#	Sequence	Normal	MRSS	MBSSID WDS					
INIO#	Dequence	Nominal	IVIDOC	סות		1	2	3	4
Two	ifconfig ra0 up	ra0	ra2	ra3	ra4	wds0	wds1	wds2	wds3
1 000	ifconfig ra1 up	ra1	ra5	ra6	ra7	wds4	wds5	wds6	wds7

WDS IS A VIRTUAL INTERFACE WITHOUT IOCTL FUNCTIONALITY.

# 19.2 Parameters for iwpriv's IOCTL

Please refer section 4 and 5 to have iwpriv parameters and values.

Parameters:

```
int
                         socket_id;
                         name[25];
                                                                    // interface name
                char
                char
                         data[255];
                                                                    // command string
                struct
                         iwreq wrq;
Default setting:
                wrq.ifr name = name = "ra0";
                                                   // interface name
                wrq.u.data.pointer = data;
                                                   // data buffer of command string
                wrq.u.data.length = strlen(data); // length of command string
                wrq.u.data.flags = 0;
```

# 19.2.1 Iwpriv Set DATA

### THESE PARAMETERS ARE THE SAME AS IWPRIV

Command and IOCTL Function

#### Sample user space Applications 19.3

```
// rtuser:
//
         1. User space application to demo how to use IOCTL function.
//
         2. Most of the IOCTL function is defined as "CHAR" type and return with string message.
//
         3. Use sscanf to get the raw data back from string message.
         4. The command format "parameter=value" is same as iwpriv command format.
//
         5. Remember to insert driver module and bring interface up prior execute rtuser.
//
//
                  change folder path to driver "Module"
                                               ; in case the files are modified from other OS environment
//
                  dos2unix *
//
                   chmod 644 *
                  chmod 755 Configure
//
//
                  make config
//
                  make
//
                  insmod RT2800ap.o
//
                  ifconfig ra0 up
// Refer Linux/if.h to have
                                                                           /* interface name */

## 21.2 2.4g

## 21.2.1 B only

```
iwpriv ra0 set FixedTxMode=CCK
iwpriv ra0 set WirelessMode=1 // 11b only
iwpriv ra0 set BasicRate=3 // 1, 2 Mbps
iwpriv ra0 set HtMcs=0 // Please check Note-11b
iwpriv ra0 set SSID=11B_only_AP // Restart AP
```

### Note-11b:

HtMcs	0	1	2	3
Rate	1 Mbps	2 Mbps	5.5 Mbps	11 Mbps

MediaTek Confidential

© 2014 MediaTek Inc.

### 21.2.2 **G** only

```
iwpriv ra0 set FixedTxMode=OFDM
iwpriv ra0 set WirelessMode=4  // 11g only
iwpriv ra0 set BasicRate=351  // 1, 2, 5.5, 11, 6, 12, 24 Mbps
iwpriv ra0 set HtMcs=0  // Please check Note-11g
iwpriv ra0 set SSID=11G_only_AP  // Restart AP
```

### Note-11g:

HtMcs	0	1	2	3	4	5	6	7
Rate	6 Mbps	9 Mbps	12 Mbps	18 Mbps	24 Mbps	36 Mbps	48 Mbps	54 Mbps

### 21.2.3 N only

#### 21.2.4 B/G/N mixed

```
iwpriv ra0 set FixedTxMode=HT
iwpriv ra0 set WirelessMode=9  // 11bgn mixed
iwpriv ra0 set BasicRate=15  // 1, 2, 5.5, 11 Mbps
iwpriv ra0 set HtMcs=0  // Please check Note-11n
iwpriv ra0 set HtGi=0
iwpriv ra0 set HtBw=0
iwpriv ra0 set SSID=11BGN_mixed_AP // Restart AP

Note-11n:
HtMcs=<0-15> + HtGi=<0-1> + HtBw=<0-1>
Please check all possible combination of above set in Section 21.1.
```

## 21.3 5g

### 21.3.1 A only

MediaTek Confidential © 2014 MediaTek Inc.

```
iwpriv ra0 set HtMcs=0 // Please check Note-11a iwpriv ra0 set SSID=11A_only_AP // Restart AP
```

#### Note-11a:

HtMcs	0	1	2	3	4	5	6	7
Rate	6 Mbps	9 Mbps	12 Mbps	18 Mbps	24 Mbps	36 Mbps	48 Mbps	54 Mbps

## 21.3.2 N only

iwpriv ra0 set FixedTxMode=HT
iwpriv ra0 set WirelessMode=11 // 5g 11n only
iwpriv ra0 set BasicRate=336 // 6, 12, 24 Mbps
iwpriv ra0 set HtMcs=0
iwpriv ra0 set HtGi=0
iwpriv ra0 set SSID=11AN\_only\_AP // Restart AP

Note-11n:

HtMcs=<0-15> + HtGi=<0-1> + HtBw=<0-1>

Please check all possible combination of above set in Section 21.1.

## 21.4 11ac

## 21.4.1 VHT Fixed Rate iwpriv command

### 21.4.1.1 fpga\_on

Description: Turn on or off VHT fixed rate

Value:

iwpriv rai0 set fpga\_on=6

0: Disable

6: Enable

### 21.4.1.2 dataphy

Description: PHY mode configuration

Value:

iwpriv rai0 set dataphy=4

0 = CCK

1 = OFDM

2 = HT-MM

3 = HT-GF

4 = VHT

### 21.4.1.3 databw

Description: Bandwidth configuration

Value:

iwpriv rai0 set databw=2

0 = 20M

1 = 40M

2 = 80M

### 21.4.1.4 datamcs

Description: MCS configuration

Value:

iwpriv rai0 set datamcs=24

Note

bit[3:0] stands for Modulation Coding Scheme (MCS)

Range: 0 - 9

bit[6:4] stands for Number of Spatial Stream (NSS)

0: 1SS 1: 2SS

Example:

datamcs=24 → 2SS MCS8

 $24 \text{ (dec)} = 0x18 = b'0\underline{001,1000}$ 

 $bit[6:4] = b'001 = 1 (dec) \rightarrow 2SS$ 

 $bit[3:0] = b'1000 = 8 (dec) \rightarrow MCS8$ 

### 1SS & 2SS MCS Rate mapping table:

#### 188

MCS Index	Modulation	Value (Dec)		
0	BPSK	0		
1	QPSK	1		
2	QPSK	2		
3	16-QAM	3		
4	16-QAM	4		
5	64-QAM	5		
6	64-QAM	6		
7	64-QAM	7		
8	256-QAM	8		
9	256-QAM	9		

## 288

MCS Index	Modulation	Value (Dec)		
0	BPSK	16		
1	QPSK	17		
2	QPSK	18		
3	16-QAM	19		
4	16-QAM	20		
5	64-QAM	21		
6	64-QAM	22		
7	64-QAM	23		
8	256-QAM	24		
9	256-QAM	25		

### 21.4.1.5 datagi

Description: Guard Interval configuration

Value:

iwpriv rai0 set datagi=0

0 = Short GI, 1 = Long GI

## 21.4.2 VHT Fixed Rate example

iwpriv rai0 set WirelessMode=14

iwpriv rai0 set fpga\_on=6 // Enable VHT fixed rate

iwpriv rai0 set dataphy=4 // VHT iwpriv rai0 set databw=2 // 80MHz iwpriv rai0 set datagi=0 // SGI

iwpriv rai0 set datamcs=25 // 2SS MCS9

The following 802.11ac rate table is from <a href="http://www.revolutionwifi.net/">http://www.revolutionwifi.net/</a>.
802.11ac OFDM Data Rates

		Bits per	Coding	20-MHz		40-MHz		80-MHz	
MCS	Modulation	Symbol	Ratio	800ns	400ns	800ns	400ns	800ns	400ns
1 Spatial Stream				Data Rate (Mbps)					
MCS 0	BPSK	1	1/2	6.5	7.2	13.5	15.0	29.3	32.5
MCS 1	QPSK	2	1/2	13.0	14.4	27.0	30.0	58.5	65.0
MCS 2	QPSK	2	3/4	19.5	21.7	40.5	45.0	87.8	97.5
MCS 3	16-QAM	4	1/2	26.0	28.9	54.0	60.0	117.0	130.0
MCS 4	16-QAM	4	3/4	39.0	43.3	81.0	90.0	175.5	195.0
MCS 5	64-QAM	6	2/3	52.0	57.8	108.0	120.0	234.0	260.0
MCS 6	64-QAM	6	3/4	58.5	65.0	121.5	135.0	263.3	292.5
MCS 7	64-QAM	6	5/6	65.0	72.2	135.0	150.0	292.5	325.0
MCS 8	256-QAM	8	3/4	78.0	86.7	162.0	180.0	351.0	390.0
MCS 9	256-QAM	8	5/6	N/A	N/A	180.0	200.0	390.0	433.3
2 Spatia	l Streams			Data Rate (Mbps)					
MCS 0	BPSK	1	1/2	13.0	14.4	27.0	30.0	58.5	65.0
MCS 1	QPSK	2	1/2	26.0	28.9	54.0	60.0	117.0	130.0
MCS 2	QPSK	2	3/4	39.0	43.3	81.0	90.0	175.5	195.0
MCS 3	16-QAM	4	1/2	52.0	57.8	108.0	120.0	234.0	260.0
MCS 4	16-QAM	4	3/4	78.0	86.7	162.0	180.0	351.0	390.0
MCS 5	64-QAM	6	2/3	104.0	115.6	216.0	240.0	468.0	520.0
MCS 6	64-QAM	6	3/4	117.0	130.0	243.0	270.0	526.5	585.0
MCS 7	64-QAM	6	5/6	130.0	144.4	270.0	300.0	585.0	650.0
MCS 8	256-QAM	8	3/4	156.0	173.3	324.0	360.0	702.0	780.0
MCS 9	256-QAM	8	5/6	N/A	N/A	360.0	400.0	780.0	866.7

## 22.1 Why does WPAPSK not work?

Please make sure the parameter "DefaultKeyID" is set to 2 in the configuration file.

## 22.2 How to switch driver to operate in 5G band?

Please make sure the IC supports 5G band. Also, please configure the WirelessMode and Channel correctly.

## 22.3 How do I check my channel list?

Please check CountryRegion or CountryRegionABand.

### 22.4 How can I know the version of current WLAN Driver?

Please use the following command. # iwpriv ra0 show driverinfo

## 22.5 Can SoftAP support Antenna diversity?

No, SoftAP do not support antenna diversity even EEPROM has set antenna enabled.

# 22.6 DFS Test example

Case 1: Band 2 & 3 select one channel for test

**Test Condition:** 

Run 30% throughput between STA and AP.

### **DFS Debug command:**

iwpriv ra0 set RadarDebug=0x10

### DFS CE certification setting in the profile:

IEEE80211H=1 DfsOutdoor=0 RDRegion=CE CountryCode=GB

#### Result:

All major test items are all passed.

Case 2: Band 2 & 3 select one channel for test.

#### Test condition:

Run video stream throughput between STA and AP. (Set AP Fix Tx Rate to MCS0) Bandwidth setting 20MHz and 20/40MHz Auto.

### **DFS Debug command:**

iwpriv ra0 set RadarDebug=0x10

#### DFS FCC certification setting in the profile:

IEEE80211H=1 DfsOutdoor=0 RDRegion=FCC CountryCode=US

#### Result:

When Radar signal run in 5498~5502MHz, Radar type 3 & 4 fail in BW 40MHz test. Radar type 1 fail in BW 20MHz test, Recommend to make the Radar signal run in 5495~5525MHz with BW 40MHz test. In 5494~5506MHz in BW 20MHz test. All major test items are all passed.

**Case 3:** Detect DFS signal without move channel. (For Lab testing) **Command Example**:

iwpriv ra0 set Debug=3 iwpriv ra0 set Channel=100 iwpriv ra0 set RadarDebug=0x10 iwpriv ra0 set ChMovTime=2 iwpriv ra0 set DfsSwDisable=0

#### Result:

When Radar signals run in channl 100, the AP will display DFS detected information on the console.

DFS deteched consloe log may look like below:

DFS HW check channel = 0x4 T= XXXXX W= XXX detected by ch 2

## 22.7 TX & RX performance is always unbalance

When encounter TX & RX performance unbalance issue during Wi-Fi performance test, please check the TxBurst option is off or on. When TxBurst is on, the TX packets will have higher priority than RX packets. In the result, the WLAN TX performance will be higher than RX. This problem usual appears in Fast Ethernet + WLAN solution. GiGaBit Ethernet + WLAN solution doesn't have such problem.

How to turn off TxBurst?

By profile:

TxBurst=0

By iwpriv command:

iwpriv ra0 set TxBurst=0

MediaTek Confidential

© 2014 MediaTek Inc.

Page 170 of 171

#### 22.8 Why can't I configure a SSID containing comma ","?

Please modify your code as follows.

```
========
INT RTMPAPPrivloctlSet(
    IN RTMP_ADAPTER *pAd,
    IN RTMP IOCTL INPUT STRUCT *ploctlCmdStr)
    PSTRING this char;
    PSTRING value;
    INT Status = NDIS STATUS SUCCESS;
    while ((this_char = strsep((char **)&ploctlCmdStr->u.data.pointer, "\0")) != NULL)
         if (!*this_char)
             continue;
         if ((value = strchr(this char, '=')) != NULL)
              *value++ = 0;
```

### 22.9 Why throughput is low when using 1SS to send traffic with legacy rate or MCS0-7?

Using 2SS to send traffic with legacy rate and MCS0-7 is our design by default. If you intend to change from 2SS to 1SS, please use TC instead of TSSI.

#### 22.10 TGn 4.2.10 failed. Why does DUT not send MC traffic?

4.2.10 Group traffic with WPA2-PSK Only Mode and WPAWPA2-PSK Mixed Mode If this item fails, please turn off IGMP Snooping first.

### 22.11 TGn 4.2.29 failed. Why the performance cannot reach the criteria?

```
Please make sure that the following items are correctly configured.
<Profile>
TxPreamble=1
PktAggregate=0
<Driver Config>
```

-CONFIG\_RA\_NETWORK\_WORKQUEUE\_BH=y +CONFIG\_RA\_NETWORK\_TASKLET\_BH=y

<Kernel Config>

Please check items in Networking Option & Core Netfilter in your kernel config. Remove those you do not use or know.
